Zero Tolerance for Breaches. As part of Centific, you are trusted with sensitive customer information. Any violation of confidentiality **will** result in severe consequences, including legal action.

ABSOLUTE DON'TS (STRICTLY PROHIBITED)

- ✗ **NO Screen Recording or Screenshots** – Capturing training material in any form is forbidden
- ✗ **NO Sharing on Public Platforms or Social**
- ✗ **NO Discussing Confidential Information with Anyone**
- ✗ **NO Modifying or Reproducing Training Content**

DO'S

- ✓ **Understand & Follow NDA Instructions** – You are legally bound by the NDA; ensure full compliance at all times
- ✓ **Follow Centific's Security Policies**
- ✓ **Access Training Only on Secure Networks**
- ✓ **Use Only Approved & Secure Devices**

General:

- ◇ Always remember that each dimension is evaluated individually. Do not let your judgment be influenced by the rating from another dimension
- ◇ Focus on each answer individually in order to rate the based on the dimension requirements. If they meet the requirements do not downgrade one answer just because you prefer how the other one looks. Focus on the key points and the user prompt (what is the main ask, are there any specific instructions such as length, list, etc.).
- ◇ Do not rush the cert, particularly the tasks that require more reading, fact-checking.
- ◇ Do not be subjective or strict in your evaluations for the dimensions. Use the guideline descriptions and examples as reference points during your evaluation.

Instruction following:

- ◇ Look for the specific requirements like length (word count, no. of sentence of paragraphs, list or bullet points, bold or highlights, etc.). Verify if the answers adhere to these explicit instructions. 200 words requested but 500 provided is not following. One sentence request but multiple sentences provided would be partially following. Refer to the examples in the guides.
- ◇ Most instructions are explicit but keep on the lookout for potential implicit instructions (eg. “provide details”, “how to make XY dish” – likely looking for ingredients and steps).
- ◇ For math, pay attention to everything being asked and the format in which it should be presented.

Truthfulness:

- ◇ When evaluating something based on the input text provided (like a summary or extraction request), check the groundedness of the response against the input text. eg. if the article says orcas live 10 years but the response lists that they live 15-20 years, this is not grounded and therefore not accurate information.
- ◇ When evaluating open questions and answers (eg. history of police report, mandarin lang), make sure to fact-check the key/important pieces of information to make sure they're truthful.
- ◇ When the primary information of the ask is wrong, fail the dimension. When the primary info is correct, but the secondary info is wrong, mark it as partially. Eg. Who won the world cup 2022?
- ◇ Resp A: The 2022 world cup was won by Argentina. The final match was played on December 08, 2022. (primary ask "who won" is correct; secondary info, not asked, is wrong).
- ◇ For prompts that don't have fact checking or groundedness from the input text, you evaluate it based on the details given by the prompt (eg. creative writing or non-fiction content, like coming up with slogans for something).

Concision:

- ◇ It can be related to instruction following in the sense that explicit length instructions might be provided in the prompt (eg. number of words, sentences, paragraphs, etc.). Based on these instructions you have to evaluate if it's concise or not. Excessively longer/shorter responses than requested would be bad. Slightly longer/shorter, would be acceptable.
- ◇ Make sure there are no distractions in the text. But note that these are in reference to unrelated content to the main topic OR excessive information that does not directly address the user query.

Satisfaction:

- ◇ When evaluating satisfaction follow this table (below) from the guidelines as a basis for your evaluation.
- ◇ Any time an individual response is downgraded, even if partially, it cannot be considered highly satisfying.
- ◇ For side-by-side satisfaction, a 1-level satisfaction difference between the individual responses cannot lead to a 3-level gap in the side-by-side evaluation. If respA is highly satisfying and respB is slightly satisfying, A cannot be much better than B.
- ◇ If both responses are highly unsatisfying, they would rank “same” side-by-side. But if they’re both slightly unsatisfying/satisfying or highly satisfying, you can evaluate them as either “same” or upgrade by one level the one that you feel might be better overall (i.e. rate is as slightly better than the other).
- ◇ The responses cannot be multiple levels apart if they have the same individual satisfaction rating (eg. both response are slightly satisfying but you marked A and better/much better than B).
