

Proofreading V2.0 Cert Feedback – Dec.18

RECAP:

Minimal edit principle

It means preserving the original text as much as possible, but obvious errors that do not fall under the exceptions should still be fixed.

Remember the principles for handling formal/informal texts as well. If the text is formal, corrections are expected. Neutral or when formality is unclear/ambiguous, side with the corrections being made. Only for informal texts, these are not necessary

Correctness

Evaluates whether the changes that have been made altered the meaning (3.1) or were they necessary and correct (3.2).

Keep in mind for Q3.1, using synonyms, similar words is NOT automatically an altered meaning, tone, style. The change would have to comprise of an actual change in tone, style, register, etc. (e.g. “hey Mark” was changed to “Dear Mark”; but “hey” vs “hi” is not a change that affects the requisites)

Completeness

Evaluates whether all the actual errors (for the scope of this task) were found and corrected properly. Do not confuse with the Correctness dimension, which only focuses on the actual edits made. In this dimension your focus points are just the actual errors and how they were fixed. Therefore, if the model missed an error from the input, it would affect this dimension.

TASK:

When answering the first question remember:

- the minimal edit principles
- the definition or expectation for what constitutes errors (pg.24)

This will help you determine whether Q1 should be a ‘Yes’ or a ‘No’.

Question 2 is quite straightforward and simple. Has the model made any corrections? You can compare the **input** with the **response (proofread copy)** and see if any changes have been made. The smallest change would qualify as a ‘Yes’. However, you must verify that the changes have been applied.

Do NOT assume based on the coloring or proposed edits text box! Sometimes the proposed edit box might show changes done but when you compare the input with the response, you might see that they’re identical.

IMPORTANT:

If part of the text from the input is missing in the response (see example below), do not assume that this is a change from the model. Consider that the model has reviewed this content and thinks it is correct (no changes needed). This has been called out in the GLs as well.

Input (original text)

Spectrum Service Alert: Service has been restored. For info: Garrett . Still down? Visit <https://greenfeldertowne.info/vedamonahan349> .

Proposed edits to the original text

For info: ~~Garrett~~.~~Garrett~~. Visit <https://greenfeldertowne.info/vedamonahan349>.

Response A (proofread copy)

→ For info: [Garrett](#). Visit <https://greenfeldertowne.info/vedamonahan349>.

Q2. Did the assistant make changes to the input?

- ☐ Yes, the response is different from the input.
- ☐ No, the response is identical to the input.

Correctness:

- **IMPORTANT:** you're focusing primarily on the edits that have been made by the model; irrelevant if they're needed or not.
- **IMPORTANT 2:** you must clearly distinguish what was the necessary edit and what was the unnecessary one. These two will help you to answer Q3.2 and the follow-up options. Again, do not assume that every change the model has made was necessary.
- Keep in mind the task is en-US, pay attention to British spelling.
- Look out for spacing fixes between words, before or after punctuation.
- Pay attention to punctuations, especially when determining if the input is formal vs informal.
- Omitting a word can be acceptable if the word itself is incorrect in the sentence structure.
- Any changes that were unnecessary will be penalized under this dimension only!
- If any portion of the text is missing from the response, assume that the model thinks the missing section contains no errors. Concentrate your review on the text that is present in the response.

Completeness:

- **IMPORTANT:** errors may exist outside of what the model has found. Do not assume the proposed edits are everything there is to fix.
- Your focus here is NOT the unnecessary changes the model made but only the actual errors. Do not let yourself get confused with the first dimension. If the text is formal and the first word was not capitalized in the sentence, that should be the error you focus on here, even if the model changed 2-3 other things (that were not necessary).
- If even one obvious error was not detected or correctly fixed by the model (in the response), you should answer the question with 'No'.
- If the model fixes an error while introducing another change you should only focus that it found and fixed the actual error, and the extra change of tone/style would be affecting Correctness instead. E.g. <btw> was changed to <By the way, >; the comma was added as a necessary fix (error found and correctly fixed) but the model expanded btw to "by the way", which was not necessary and this would be penalized in Correctness, NOT Completeness.

EXAMPLES

1.

travelling is an essential in everybody's life. Although the number of cars are increasing day by day, however most of the people traveled through the public transport .Their limited income restrict them to buy cars. also the main drawback of cars is the environmental pollution. Therefore public transport has its own importance. In order to avoid the environmental pollution, people should use the public transport that will not only help to reduce the pollution but also the extra expenditures for the petrol. government should focus for the improvement of public transport and must discourage the individual cars.

Travelling is essential in everybody's life. Although the number of cars is increasing day by day, however, most of the people travel through public transport. Their limited income restricts them from buying cars. Also, the main drawback of cars is environmental pollution. Therefore, public transport has its own importance. In order to avoid environmental pollution, people should use public transport, which will not only help to reduce pollution but also the extra expenditures for petrol. The government should focus on the improvement of public transport and must discourage the use of individual cars.

Their limited income restrict restricts them to buy cars. also from buying cars. Also, the main drawback of cars is the is environmental pollution. Therefore Therefore, public transport has its own importance. In order to avoid the avoid environmental pollution, people should use the use public transport that transport, which will not only help to reduce the reduce pollution but also the extra expenditures for the petrol. petrol. The government should focus for on the improvement of public transport and must discourage the the use of individual cars.

Q2. Did the assistant make changes to the input?

☒ Yes, the response is different from the input.

☐ No, the response is identical to the input.

- Travelling is British spelling, not en-US.
- Note how some changes in spacing or punctuation highlight the actual words around it. This does not mean the word was changed, pay attention to the details in the changes.
- Notice the “pollution,people” section is missing a space and the model never noticed this (Completeness, answer is ‘No’). Many selected ‘yes’ on Q4.
- Also pay attention to the second sentence in the input with “although” and “however”. These are two words that signal contrast and don’t make grammatical sense in the same sentence.

2.

yes. Good question, but I haven't done the relevant calendar research to figure it out. EricM, I leave that to you. Call/page me if you'd like help.

Yes. Call orpage me if you'd like help.

Q2. Did the assistant make changes to the input?

☐ Yes, the response is different from the input.

☐ No, the response is identical to the input.

Proposed edits to the original text

yesYes. Call/Call orpage me if you'd like help.

COUNT	ANSWER	USERS

In the above example, a substantial portion of the text is missing from the response. According to the guidelines callout, when this occurs, assume the model thinks the omitted content is correct and contains no errors. The model only identified two errors and so only those two sentences were provided.

- A third of the people looked at the above input text and still answered “yes, the input is correct”, with an obvious lower-case ‘yes’ issue at the start of the sentence. The input is somewhat formal/neutral, therefore corrections are expected.
- The model correctly identifies and fixes the Yes capitalization issue.
- However, it unnecessarily edits the “Call/page” part. Not only that, but it also introduced a new error (or fixes it incorrectly) by not adding a space between “or” and “page”. We choose “mixed, only some edits are necessary”.
- Therefore, the necessary edits (<yes.>) would be “yes, all necessary edits are correct”. However, a third of people still answered this wrong.
- In Completeness, 2/3 of people failed to choose the correct option, which was “Yes, all errors were found and properly corrected”, since the only real error was the lower-case ‘yes’. Remember, we only care about the actual errors and their correction. If unnecessary changes were done (whether correct or not), they would affect Correctness.

3.

I hesitate to speak for Heather, but in her absence, the time is do-able here in Pacific time; however, at glancing at her schedule she may have conflicts with this time, at least on Mondays/Wednesdays

I hesitate to speak for Heather, but in her absence, the time is doable here in Pacific time; however, at a glance at her schedule, she may have conflicts with this time, at least on Mondays/Wednesdays.

Q2. Did the assistant make changes to the input?

☒ Yes, the response is different from the input.

☐ No, the response is identical to the input.

Proposed edits to the original text

I hesitate to speak for Heather, but in her absence, the time is do-abledoable here in Pacific time; however, at glancinga glance at her scheduleschedule, she may have conflicts with this time, at least on MondaysWednesdays/Wednesdays.

Similar to the previous example, straight off-the-bat we can see the input has errors, but some graders still marked the input as perfect. And while changes are also obvious, some graders still selected the response is identical to the input.

Please note, “at glancing at” does not sound grammatically correct and the proposed correction in the above case is not exactly correct either. The ‘comma’ after schedule is fine.
