

Writing Tool Guidelines- Proofreading V2

v. 2026 Feb. 24 updated on: 03 / 09 / 2026

Announcements

v. 2026 Feb. 24 Updates - Please Review

Context: The update of this round is driven by ambiguity that the team has observed in Proofread data and model responses. There was the need to further define error types, and not all types of errors carry the same weight. The updates in the grading questions and guidelines are meant to address the above issues.

In the guidelines PDF, graders can find the update summary listed on Page 2.

- The part that requires most of their attention is the newly added Step 2 - Classify the formality level of the Input Text.
- This question is meant for graders to do an assessment. Whether the text is formal or not (informal, casual, etc) will determine the expected model behaviors.
- Graders must be familiar with different error types (critical/must fix errors, minor errors, and stylistic choice) and how to handle formal vs informal text.

This version includes a few major updates:

- **A new step (Step 2):** The team has decided to add a new step - Classify the formality level of the Input Text.
 - Review the types of errors, examples, and how they impact your grading of formal / informal input text.
- **Step 3 - Assess the input text and the response:** The wording of the question is updated. The instructions are streamlined and simplified.
- **Step 4 - Evaluate Correctness:** There are minor updates to some of the follow-up questions. See the updated flow chart.
- **Step 5 - Evaluate Completeness:** There are minor updates to the question, which now has 4 scales to choose from.

Announcements

Updated Jan. 29:

- Updated the guidelines for Step 1: Review the Original Input Text to include checking for ambiguity and incomprehensibility in addition to grammatical errors.
- Step 2/ Question 1 (for Input Text). The question now asks about both grammatical correctness and clarity, including punctuation. We've also added a third option to indicate if the meaning of the text is completely unclear.
- New guidelines added to help you assess the level of ambiguity of the input text. We've outlined three scenarios: 1) The entire input is comprehensible, 2) The input contains both comprehensible and ambiguous parts, and 3) The entire input is incomprehensible. Each scenario has specific instructions for how to answer Step2/ Question 1
- **Note:** The issue about truncated / omitted text (See announcement on Dec. 10) is now fixed.

Updated Dec. 19: We made a minor correction the 2nd example on page 34.

Announcements

Dec. 10 Special Callouts for Certification

The Proofread feature is designed to process the entire input text without omission. However, in rare cases, you may observe truncated output in the grading UI.

In such instances, please assume the assistant found no errors in the omitted portion. In the backend, this means the assistant would return the same text without making any edits. Our engineering team is actively working to resolve this discrepancy, ensuring analysts see the full, unedited text in the frontend.

How to apply this callout to grading?

In the screenshot below, the assistant omits **Defund the CBC already. Do better. Report real news for hells** in the input.

- In the backend, this omission indicates that the assistant identified no errors in that specific text (and *would* return it unchanged, pending the frontend fix).
- Therefore, when grading such cases, please select: **"No, the response is identical to the input."**

Note: in the screenshot, the word "dictator" is marked in both the Proposed Edits and the Proofread Copy, while the Proofread Copy (response) actually doesn't change anything in the input. When this occurs, please ignore the marking, assume no change made, and proceed to grade.

RESPONSES
3/3 Complete

Response A

Response B

Response C

Input (original text)

CBC continues to butter up Canada's dictator and spread his absolute garbage messages. Defund the CBC already. Do better. Report real news for hells sakes

Q1. Is the input text grammatically correct?

☐ Yes, the input text is grammatically correct.

☒ No, the input text contains one or more errors.

Grading Responses

Input (original text)

CBC continues to butter up Canada's dictator and spread his absolute garbage messages. Defund the CBC already. Do better. Report real news for hells sakes

Proposed edits to the original text

CBC continues to butter up Canada's ~~dictator~~-dictator and spread his absolute garbage messages.

Response A (proofread copy)

CBC continues to butter up Canada's dictator and spread his absolute garbage messages.

Q2. Did the assistant make changes to the input?

☐ Yes, the response is different from the input.

☒ No, the response is identical to the input.

Submit

01

Introduction

Introduction

The goal of the Proofreading feature is to correct all grammatical errors in the user's input text while preserving the original tone, style, and register as much as possible.

Your evaluation of the response/output will focus on two dimensions: **Correctness** and **Completeness**.

- **Correctness** verifies whether all edits in a response are correct and adhere to the Minimal Edit Principle.
- **Completeness** verifies whether all errors in the input text are detected and corrected properly.

Guideline Learning Path

There are many nuances to Proofread and understandably so, given that the feature has to meet user expectations in different cultural, linguistic, formal and informal contexts.

To navigate the complexity, begin the guideline review by getting familiar with:

1. Minimal Edit Principle
2. Principles for Handling Ambiguous or Informal Contexts

These principles will help you prioritize and navigate complex scenarios.

Workflow

- 1 Review the Original Input Text
- 2 Classify the formality level of the Input Text
- 3 Make an initial assessment of the Input Text and the Response (Proofread Copy)
- 4 Evaluate the Correctness of the Response
- 5 Evaluate the Completeness of the Response
- 6 Compare Responses in Pair

Select the Chapters to
navigate to another section.

* Step 1 * Step 2 * Step 3 * Step 4 * Step 5 * Appendix
Local-Specific Guidelines * Japanese * Arabic Language * Hinglish

02

Proofreading

Grading Principles

Before you review the evaluation guidelines and dimensions, we'd like to first introduce you to:

- I. **Minimal Edit Principle**, which the Proofread feature conforms to and mainly impacts the **Correctness** dimension.
- II. **Principles for Handling Ambiguous or Informal Contexts**

I. What is the Minimal Edit Principle?

Proofreading edits must be strictly minimal—addressing only grammar, punctuation, capitalization, spelling, or formatting issues as lightly as possible.

No changes in the response should alter the meaning, style, tone, register, or intent of the input text.

Note: **register** refers to the level of formality or style of speaking or writing used for a particular purpose or situation.

If any one of the following is violated, you will penalize the response under Correctness dimensions.

1. Preserve semantic content
2. Preserve tone, register, style, and formality
3. Preserve pronoun referentiality
4. Preserve proper noun referentiality
5. Preserve expressivity, colloquialisms or slang (this section needs your particular attention – PLEASE REVIEW)
6. Preserve formatting
7. Preserve Local Punctuations and Formatting

In the next few pages, you will see the examples of these rules.

!! While most of the rules and the examples are straightforward, we do want to call out the rule to **Preserve expressivity, colloquialisms or slang**. Make sure to review that section.

Select the Chapters to
navigate to another section.

* Introduction * I. Minimal Edit Principle * II. Principles for Handling Ambiguous or Informal Contexts
* Step 1 * Step 2 * Step 3 * Step 4 * Step 5 * Appendix
Local-Specific Guidelines * Japanese * Arabic Language * Hinglish

I. Minimal Edit Principle - Rules and Examples

1. Preserve Semantic Content

Does the response maintain the original meaning and intent of the input text without introducing new content or altering expression?

Vocabulary, emphasis, and degree must be preserved exactly — even small lexical substitutions (including synonyms) or simplifications count as unnecessary edits (because they cause undesirable semantic shifts).

Violations (bad corrections) include:

- "**help fix** the issue" → "**resolve** the issue" (when "help fix" is grammatically correct)
- "**somewhat** successful" → "successful" (removing hedge words changes meaning)
- "**most** important" → "important" (removing qualifier changes emphasis)
- " **regards" → "**kind** regards" (changing degree of politeness)**
- "**saddened** to hear" → "**sad** to hear" (rewording without grammatical need)
- "**take part** in" → "**participate** in" (substituting with synonym unnecessarily)

I. Minimal Edit Principle - Rules and Examples

2. Preserve Tone, Register, Style, and Formality (Rules)

Does the response maintain the same level of formality, politeness, and tone as the input text, respecting all relevant linguistic and cultural markers in the language? This includes preserving:

- Intended honorifics, verb forms, and polite vs. impolite pronouns
- Formal vs. informal vocabulary and set phrases
- Modal verbs, hedging, and indirect expressions
- Sentence structure and polite interjections
- Forms of address, titles, and honorifics

Minor adjustments that are strictly required to fix **grammatical** errors are allowed and do not count as violations, even if they slightly change the surface form.

However, avoid upgrading or downgrading the overall level of formality unless it is required to correct an actual error.

02 Proofreading Grading Principles

I. Minimal Edit Principle - Rules and Examples

2. Preserve Tone, Register, Style, and Formality (Examples)

Violations (bad corrections) include:

- You **should** check the report before submitting. → You **must** check the report before submitting.
- I was wondering if you **could** send me the report. → I was wondering if you **might** send me the report.
- 수미씨는 요즘 건강이 **어떠세요?** → 수미씨는 요즘 건강이 **어떠니?** (Korean)
- ¿**Tú podrías** enviarme el informe mañana? → ¿**Usted podría** enviarme el informe mañana? (Spanish)
- Mai **tui** ghé → Mai **tôi** ghé (Vietnamese)
- 你**飲**咗酒? → 你**喝**了酒? (Hong Kong Chinese)

Non-violations (desirable corrections) include:

- 할머니께 선물을 **줬어요**. → 할머니께 선물을 **드렸어요**. (Corrects the verb to the proper honorific form, appropriate for addressing someone of higher status or age)
- Sách này hay lắm, cậu đọc **nó** chưa? → Sách này hay lắm, cậu đọc chưa? (Correct / remove what sounds off or redundant)
- 我吃**咗**藥 → 我**食**咗藥 (The co-existence of informal aspect marker and formal verb in the input is not desirable and should be corrected)
- In English, almost all tone/register/style/formality changes are likely to be violations.

* Introduction * I. Minimal Edit Principle * II. Principles for Handling Ambiguous or Informal Contexts
* Step 1 * Step 2 * Step 3 * Step 4 * Step 5 * Appendix
Local-Specific Guidelines * Japanese * Arabic Language * Hinglish

02 Proofreading Grading Principles

I. Minimal Edit Principle - Rules and Examples

3. Preserve Pronoun Referentiality

Does the response fully maintain the person, number, or gender features of each pronoun in the input text?

Only grammatical corrections (e.g., case changes) are allowed.

Violations:

Referential shifts

(e.g., "me" → "us", "he" → "she")

Non-violations:

Correcting grammatical case errors where necessary

(e.g., "they" → "them", "you" → "your")

Select the Chapters to

* Step 1 * Step 2 * Step 3 * Step 4 * Step 5 * Appendix
Local-Specific Guidelines * Japanese * Arabic Language * Hinglish

02 Proofreading Grading Principles

I. Minimal Edit Principle - Rules and Examples

4. Preserve Proper Noun Referentiality

Does the response preserve all proper nouns (people, places, organizations, brands) occurring in input text exactly, except for non-referential case inflections (e.g., possessive or oblique case markers)? Proper nouns should never be replaced or changed except for non-referential grammatical inflections like possessive suffixes. Changes to the actual proper noun are prohibited.

**Violations:**

Any modification of the proper noun itself
(e.g., "Paris" → "London", "Sara" → "Sarah")

**Non-violations:**

Case or possessive inflections where appropriate
(e.g., "Sara" → "Sara's")

* Step 1 * Step 2 * Step 3 * Step 4 * Step 5 * Appendix
Local-Specific Guidelines * Japanese * Arabic Language * Hinglish

I. Minimal Edit Principle - Rules and Examples

5. Preserve Expressivity, Colloquialisms, or Slang

The response must retain all **expressive elements** exactly as in the input text. **Do not add, remove, or normalize them.**

Preserve exactly:

- Emojis and emoticons (including skin tones/variation).
- Expressive punctuation: !, ?, ?!, !!!, ???, etc.
- Interjections and fillers (e.g., wow, uh).
- Repetition and emphasis (soooo, yessss, ALL CAPS, Mixed Case).
- Established acronyms/initialisms/internetisms (e.g., lol/LOL, MDR, PTDR, OK, GOAT), technical acronyms (PDF, GPS), units (km, kg), usernames, and hashtags.

Violations (bad corrections):

- Hi John! → Hi John, (changing expressive punctuation)
- I'm confused??? → I'm confused? (reducing repeated question marks)
- **Soooo** happy 😊 → **So** happy :) (reducing letter repetition or swapping emoji)

Non-violations (when necessary and non-expressive):

- Fix grammar or spelling without altering expressive elements (e.g., "**Teh** day was great!!!" → "**The** day was great!!!").
- Close unmatched quotes/brackets **if clearly accidental**, but do not reduce expressive punctuation elsewhere.
- Move a period or comma if strictly required for grammatical correctness, while preserving expressive marks (e.g., keep "!!!" intact).

02 Proofreading Grading Principles

I. Minimal Edit Principle - Rules and Examples

5. Preserve Expressivity, Colloquialisms, or Slang - Important Callouts

Do NOT expand common abbreviations of longer words. These are typically intentional and function as words in their own right; keep them as written (including casing and punctuation). This also applies to abbreviated slurs/insults and widely used internet slang.

Do expand shorthands that are used mainly to write faster can be expanded when the context is unambiguous.

Only fix clear typos; DO NOT normalize or “spell out” these forms.

- If the response incorrectly expands common abbreviations in an input text, this would result in the response being downgraded under **Correctness**.
- Review some examples below.

English

- lol — keep as “lol” (intentional slang; do not expand)
- af — keep as “af” (intentional emphasis/slang; do not expand)
- bro — short for “brother”; commonly used; keep as “bro”
- bros — short for “brothers”; commonly used; keep as “bros”

Spanish

- bss → besos (“kisses”) — keep as “bss” (purposeful, meme-like usage; do not expand)
- cumple → cumpleaños (“birthday”) — keep as “cumple” (widely used informal shortening)
- finde → fin de semana (“weekend”) — keep as “finde” (widely used informal shortening)

02 Proofreading Grading Principles

I. Minimal Edit Principle - Rules and Examples

5. Preserve Expressivity, Colloquialisms, or Slang - **Important Callouts**

Refer to the informal content word lists: In [Appendix - Informal Content Word Lists](#), we have included the words lists provided by the Design team. Use them as a reference when you encounter abbreviations.

Select the Chapters to
navigate to another section.

* Introduction * I. Minimal Edit Principle * II. Principles for Handling Ambiguous or Informal Contexts
* Step 1 * Step 2 * Step 3 * Step 4 * Step 5 * Appendix
Local-Specific Guidelines * Japanese * Arabic Language * Hinglish

I. Minimal Edit Principle - Rules and Examples

6. Preserve Formatting

Does the response retain all formatting quirks and special symbols exactly as in the input text, without introducing any new ones?

Indentation, bullet styles, and other layout features should be the same between input text and in response.

- Line breaks, indentation, and spacing must be identical
- Special formatting symbols must remain unchanged
- Paragraph structure must be preserved
- Numbers written in digits should not be replaced with word forms.
- ALL CAPS words should be preserved.

I. Minimal Edit Principle - Rules and Examples

7. Preserve Local Punctuations and Formatting

The response should respect and preserve the locale-specific punctuation and formatting.

	Target Locale	Topic	Input	Output	Explanation
1	en-GB	Punctuation	Yeah, my 10am kid was a complete "no-show".	Yeah, my 10 a.m. kid was a complete "no-show."	In British English, a period is placed outside of the quotation marks. However, in this example, the period in the input got "corrected" and misplaced inside the quotes, which is the en-US style. This scenario would be considered out-of-locale (i.e. violating the principle of localization and showing content that is not helpful to local users).
2	en-SG	Date	My license will expire on 23/11/2027.	My license will expire on 11/23/2027.	en_SG adopts the British date format (DD/MM/YY). The output made an incorrect edit by applying the U.S. date formate (MM/DD/YY). This is considered unnecessary edit and is out of locale.

II. Principles for Handling Ambiguous or Informal Contexts

You have reviewed **I. Minimal Edit Principle**. Now, let's review **II. Principles for Handling Ambiguous or Informal Contexts**.

You will encounter input texts that seem informal, such as an SMS messages, messages from chat apps, or informal email exchanges. These informal scenarios can cause many evaluation challenges, especially for commas, punctuation, and style.

Use the principle below to guide your assessment:

1. Add punctuation when contextually appropriate.
2. Preserve colloquial or informal style.
3. Accept reasonable interpretations of unclear text.

II. Principles for Handling Ambiguous or Informal Contexts

1. Add punctuation when contextually appropriate.

- **For formal / neutral text:** In writing that is clearly neutral or formal, adding correct punctuation is expected.
- **When Formality is Unclear:** Prioritize grammatical correctness. You should err on the side of adding punctuation if it makes the sentence more correct and easier to understand.

II. Principles for Handling Ambiguous or Informal Contexts

2. Preserve colloquial or informal style.

- **If the text is clearly informal:** Do **not** formalize or standardize text **that is *clearly* informal**. Avoid changing colloquial expressions or adding pronouns in deliberate omissions, such as subject ellipsis in English
 - Ex: "gonna" → do not change to "going to"
 - Ex: "went to da store today." → do not add a subject as in "I went to da store today."
 - In this scenario, **an identical response "went to da store today."** is acceptable.
 - Ex: "lol, that's funny 😂" → do not add a period at the end of the sentence.
 - Given the sentence is clearly informal, it is acceptable to preserve the style in the input and omit the hard stop in the response.
 - In this scenario, an identical response "lol, that's funny 😂" is acceptable.
- **If the text's formality is ambiguous:** It is acceptable to make edits that increase formality if they also improve grammatical correctness.
 - In these ambiguous cases, changing "gonna" to "going to" would be considered a necessary and correct edit.
 - When in doubt, err on the side of accepting such changes if they enhance grammaticality and/or clarity.

II. Principles for Handling Ambiguous or Informal Contexts

3. Accept reasonable interpretations of unclear text.

When the meaning of the input text is truly unclear, there are two acceptable outcomes for a response:

- **A Reasonable Edit is Made:** If the response makes a plausible, good-faith edit that clarifies the text, this is acceptable. The interpretation should be logical and shouldn't invent a meaning that seems unlikely.
- **No Edit is Made:** It is also acceptable for the response to leave the ambiguous text as-is. **Do not penalize** the lack of edits—since it's reasonable to avoid changes when the intended meaning is genuinely ambiguous.

03

Steps and Requirements

03 Steps and Requirements

Workflow

- 1 Review the Original Input Text
- 2 Classify the formality level of the Input Text
- 3 Make an initial assessment of the Input Text and the Response (Proofread Copy)
- 4 Evaluate the Correctness of the Response
- 5 Evaluate the Completeness of the Response
- 6 Compare Responses in Pair

!! Please be sure to align with the **locale-specific guidelines** and refer to the grading framework under each dimension to make your evaluation.

- Please be sure to review **Locale-Specific Guidelines** tab.

navigate to another section.

* Introduction * I. Minimal Edit Principle * II. Principles for Handling Ambiguous or Informal Contexts
* Step 1 * Step 2 * Step 3 * Step 4 * Step 5 * Appendix
Local-Specific Guidelines * Japanese * Arabic Language * Hinglish

Step 1: Review the Original Input Text

In this first step, review the original input text with these questions in mind, as you will use the information gathered in this step to answer the first question.

- Is there any grammatical error in the input text?
- Is part of the input text ambiguous due to (lack of) punctuation?
 - ex: "I like cooking my family and my pets." is ambiguous. It should be "I like cooking, my family, and my pets."
- Is the input text too vague and completely incomprehensible?

What counts as a grammatical error?

A grammatical error is an objective violation of the foundational rules of language, such as incorrect spelling, punctuation, subject-verb agreement, or sentence structure.

This definition excludes subjective assessments of writing, meaning issues of tone, style, or unnatural phrasing are not considered grammatical errors.

03 Steps and Requirements

Step 1: Review the Original Input Text

Keep in mind what you have learned about the **Minimal Edit Principle** when assessing grammatical errors. Below is an excerpt to help you refresh:

Proofreading edits must be strictly **minimal**—addressing only grammar, punctuation, capitalization, spelling, or formatting issues as lightly as possible.

No changes in the response should alter the meaning, style, tone, register, or intent of the input text.

- **Note:** register refers to the level of formality or style of speaking or writing used for a particular purpose or situation.

If any one of the following is violated, you will penalize the response under **Correctness** dimensions.

- Preserve semantic content
- Preserve tone, register, style, and formality
- Preserve pronoun referentiality
- Preserve proper noun referentiality
- Preserve expressivity, colloquialisms or slang
- Preserve formatting
- Preserve Local Punctuations and Formatting

Locale: `en_US`

+ Skip Current Task

Input (original text)

Spectrum Service Alert: Service has been restored. For info: Garrett . Still down? Visit <https://greenfeldertowne.info/vedamonahan349> .

Q1. Is the input text grammatically correct?

☐ Yes, the input text is grammatically correct.

☐ No, the input text contains one or more errors.

Select the Chapters to
navigate to another section.

* Introduction * I. Minimal Edit Principle * II. Principles for Handling Ambiguous or Informal Contexts
* Step 1 * Step 2 * Step 3 * Step 4 * Step 5 * Step 6 * Appendix
Local-Specific Guidelines * Japanese * Arabic Language * Hinglish

03 Steps and Requirements

Step 2: Assess the Formality Level of the Input Text

You will begin the task by classifying the formality level of the input text. Your formality assessment will help you determine which errors the assistant is required to fix versus which are optional.

Question 1

What is the formality level of the input text?

- ☐ Formal (Government, legal, academic research)
- ☐ Other (Semi-formal, informal, colloquial)

The Purpose of this Question

Not all grammatical errors carry the same weight. The formality of the input text determines whether an error must be fixed, is optional to fix, or should be preserved entirely. Review the instructions below:

- A.** Understand the error types
- B.** Expectations for different error types in formal vs other context

Select the Chapters to
navigate to another section.

* Introduction * I. Minimal Edit Principle * II. Principles for Handling Ambiguous or Informal Contexts
* Step 1 * Step 2 * Step 3 * Step 4 * Step 5 * Step 6 * Appendix
Local-Specific Guidelines * Japanese * Arabic Language * Hinglish

03 Steps and Requirements

Step 2: Assess the Formality Level of the Input Text

A. Understand the error types

In a formal or informal piece of text, you can expect to catch these types of errors: **critical**, **minor**, and **stylistic choice**.

Category	Definition	Examples	Action
Critical Errors	An error should only be "critical" if it: • Genuinely blocks comprehension (reader can't understand) • Changes the intended meaning (says something different) • Creates true ambiguity (multiple valid interpretations) • Violates fundamental grammar (sounds wrong to native speakers)	Typical crucial errors include but are not limited to: • Subject-Verb Agreement Errors • Wrong Word Usage (Semantic Errors) • Severe Homophone Errors (Meaning-changing. Ex: "their" vs "there") • Gender/Pronoun Agreement Errors • Tense Inconsistency (Within Same Context) • Misspellings (Comprehension-blocking) • True Pronoun Ambiguity See the Critical Error Table on slide 34 for examples	Must Fix in both formal and informal context.

Select the Chapters to navigate to another section.

Step 2: Assess the Formality Level of the Input Text

A. Understand the error types

In a formal or informal piece of text, you can expect to catch these types of errors: **critical**, **minor**, and **stylistic choice**.

Category	Definition	Examples	Action
Minor Errors	Minor errors are acceptable under the Minimal Edit Principles. They arguably break a formal grammar rule but do not hinder comprehension or readability. Important: In informal context, if the assistant fixes these minor errors, that's fine—but if they leave them as-is, that's also acceptable. The assistant should NOT be penalized for preserving these minor errors in informal/other contexts.	Minor errors can include but are not limited to the examples below: Punctuation • Missing apostrophe in contractions: "dont" instead of "don't" • Missing comma in direct address: "Hey John how are you?" • Comma splice: "I'm tired, let's go home" • Missing period at end of sentence: "Sounds good" • Missing question mark: "Are you coming" Capitalization • Lowercase "i": "i think we should meet" Sentence Structure • Starting with conjunction: "But I don't want to" • Sentence fragments: "Because I said so" Style/Convention • Insertion of "that" is optional: "I think we should go" (vs "I think that we should go") • Double negatives in dialect: "I don't have no money" (when dialectally appropriate)	Fix only in formal contexts. Optional to fix in informal/ other contexts. The assistant is NOT penalized for leaving them as-is.

Select the Chapters to navigate to another section.

03 Steps and Requirements

Step 2: Assess the Formality Level of the Input Text

A. Understand the error types

In a formal or informal piece of text, you can expect to catch these types of errors: **critical**, **minor**, and **stylistic choice**.

Category	Definition	Examples	Action
Stylistic Choices	Technically "incorrect" but intentional based on tone. (e.g. slang, sentence fragments for effect)	Examples include but are not limited to: • Intentional Misspellings/Elongation: "yesssss finally done"" • Creative Punctuation for Tone: "wait what????? that's insane!!!" • ...	Preserve / Do Not Fix

- * Appendix
- Local-Specific Guidelines
- * Japanese
- * Arabic Language
- * Hinglish

03 Steps and Requirements

Step 2: Assess the Formality Level of the Input Text

A. Understand the error types

Callouts for Minor Errors

It is acknowledged that what counts as a "minor error" can be highly ambiguous at times. For examples:

- **Edge case 1 - No capitalization at sentence start:** "sounds good to me"
- **Edge case 2 - Run-on sentences:** "I'm going to the store do you need anything"

For the edge case 1, if the ENTIRE text is in lowercase, that might be acceptable. It can be hard to make that call if we are seeing just that sentence in isolation.

For the edge case 2, the run-on sentence situation feels more serious than just a minor error without the whole text.

Action for analysts: In both highly ambiguous scenarios, the engineering team would like you to take into account the whole text to determine whether the error should be treated as an anomaly or is consistent with being very informal.

Select the Chapters to
navigate to another section.

* Introduction * I. Minimal Edit Principle * II. Principles for Handling Ambiguous or Informal Contexts
* Step 1 * Step 2 * Step 3 * Step 4 * Step 5 * Step 6 * Appendix
Local-Specific Guidelines * Japanese * Arabic Language * Hinglish

Step 2: Assess the Formality Level of the Input Text

A. Understand the error types

Typical Critical Errors

These errors are considered critical because they genuinely impede comprehension, change intended meaning, or create true ambiguity—issues that persist regardless of formality level.

Error Type	Description	Examples
Subject-Verb Agreement Errors	Mismatch between subject and verb number/person	"The team have been working" → "The team has been working" "She don't understand" → "She doesn't understand" "They goes to school" → "They go to school"
Wrong Word Usage (Semantic Errors)	Using a word that means something different than intended	"I except your apology" → "I accept your apology" - The medicine had no affect" → "The medicine had no effect" "Please advice me" → "Please advise me"
Severe Homophone Errors (Meaning-changing)	Homophone confusion that changes or obscures meaning	"Their going to there house" → "They're going to their house" "Your right" → "You're right" "Its time to go" → "It's time to go" (when meaning "it is")

Select the Chapters to
navigate to another section.

Step 2: Assess the Formality Level of the Input Text

A. Understand the error types

Typical Critical Errors

These errors are considered critical because they genuinely impede comprehension, change intended meaning, or create true ambiguity—issues that persist regardless of formality level.

Error Type	Description	Examples
Gender/Pronoun Agreement Errors	Incorrect gender marking or pronoun-antecedent mismatch	"The girl forgot his backpack" → "The girl forgot her backpack" (In gendered languages) "La problema" → "El problema" (Spanish)
Tense Inconsistency	Illogical tense shifts within the same temporal context	"I went to the store and buy milk" → "went...bought" "She is cooking when he arrived" → "was cooking...arrived" "Tomorrow I went shopping" → "Tomorrow I will go shopping"
Severe Misspellings (Comprehension-blocking)	Misspellings that genuinely prevent understanding	"The rproject is complte" → "The project is complete" "Plesae reveiw the dcomunet" → "Please review the document" "I hvae a quesiton" → "I have a question"
True Pronoun Ambiguity	Unclear pronoun reference preventing comprehension	"John told Mark he was fired" (who was fired?) "The box is in the bag. Move it." (move what?) "Sarah called Anna when she arrived" (who arrived?)

03 Steps and Requirements

Step 3: Make an Initial Assessment of the Input Text and Response

After reviewing the Input Text, you will now make an initial assessment of the Input and the response, which is a proofread copy.

Question 1

Does the input text contain errors that hinder comprehension or readability, considering its intended formality level? (Consider only errors that require correction under the minimal edit principle)

- ☐ No errors - The input is appropriately clear and readable for its formality level.
- ☐ Yes - The input contains errors that hinder comprehension or readability.
- ☐ The input is too ambitious. Cannot assess without additional context.

Question 2 (for Response)

Did the assistant make changes to the input?

- ☐ Yes, the response is different from the input.
- ☐ No, the response is identical to the input.

If the meaning of the text cannot be determined

- This scenario occurs when the entire input text is so vague, unclear, or incomplete that you cannot reasonably assess its grammatical correctness or punctuation (e.g., it's gibberish, a single unidentifiable word, or a fragment completely devoid of context.) In short, the meaning of the input cannot be determined.
- For example: "This is hard the who pays bit."
- Expectation for Assistant: In this example, the assistant is expected to leave the text unedited (i.e. generate the same response).

Action for you to take for Q1:

- Select "No, the meaning of the text cannot be determined because the text is so poorly constructed or lacks sufficient context."
- Depending on whether or not the assistant returns an edited response (same as the input), different derived scores will be displayed for you. No further action from analysts is needed.

03 Steps and Requirements

Step 3: Make an Initial Assessment of the Input Text and Response

Question 2 (for Response) Instructions

When answering Question 2, you will see edits appearing in **red** and **blue text**. A clean copy will also be displayed for you. See the screenshot below.

Important: For Question 2, If you select "No, the response is identical to the input," there is no need to continue to Steps 3 and 4 (evaluating the Correctness and Completeness dimensions).

Grading Responses

RESPONSES
0/3 Complete

Response A

Response B

Response C

Input (original text)

Local-Specific Guidelines * Japanese * Arabic Language * Hinglish

03 Steps and Requirements

Step 4: Evaluate the Correctness Dimension of the Response

Depending on your questions in the previous steps, different questions will be displayed for you to evaluate Correctness.

You will be prompted to answer **a follow-up question "Did any edits alter the original meaning, tone, style, or register?"** if you made the selections below:

- Q1. Does the input text contain errors that hinder comprehension or readability, considering its intended formality level? - **No errors.**
- Q2. Did the assistant make changes to the input? - **Yes**
- **Follow-up question:** Did any edits alter the original meaning, tone, style, or register?

You will be prompted to answer **a Follow-up question "Are all the edits in the response necessary?"** if you have made the selections below:

- Q1. Does the input text contain errors that hinder comprehension or readability, considering its intended formality level? - **Yes. The input contains errors.**
- Q2. Did the assistant make changes to the input? - **Yes**
- **Follow-up question:** Are all the edits in the response necessary? See below.

Follow-up question (If the Input Text contains no errors)

Did any edits alter the original meaning, tone, style, or register?

- ☐ Yes, at least one edit altered the original meaning, tone, style, or register.
- ☐ No, none of the edits altered the original meaning, tone, style, or register.

Follow-up question (If the Input Text contains errors)

Are all the edits in the response necessary?

- ☐ Yes, all edits in the response are necessary.
- ☐ Mixed, only some edits are necessary.
- ☐ No, all edits are unnecessary.

Depending on your answer to Question 3-2 , different follow-up questions will surface.

Local-Specific Guidelines * Japanese * Arabic Language * Hinglish

03 Steps and Requirements

Step 4: Evaluate the Correctness Dimension of the Response (flowchart)

Below is a flowchart showing how the questions provided will appear depending on your answer to Q 3-2.

Select the Chapters to navigate to another section.

* Introduction * I. Minimal Edit Principle * II. Principles for Handling Ambiguous or Informal Contexts
* Step 1 * Step 2 * Step 3 * Step 4 * Step 5 * Step 6 * Appendix
Local-Specific Guidelines * Japanese * Arabic Language * Hinglish

! Step 4: Correctness Guideline Callouts

1. The intent behind the Correctness dimension

- This dimension is meant to verify whether the edits made in a response are 1) necessary and 2) correct.
- Necessity is important to Proofread because this feature is not supposed to change style, tone, meaning, or register—all of them considered unnecessary edits.
- Make sure you're familiar with Minimal Edit Principle before evaluating this dimension.

2. Derived scores will be visible to you

Different derived scores for Correctness will be displayed for you, depending on your answers to each question and its follow-ups. There will be 4 scales:

- **Excellent**
- **Good**
- **Fair**
- **Poor**

You won't need to provide or engage with these scores explicitly (because they are automatically computed), but they will be displayed for your reference.

You will base the pairwise comparison later on these derived scores.

3. Error category definitions

Some questions will display issue categories for you to select. Refer to the tables on the next pages to guide your selections:

- I. Error categories for **incorrect** edits
- II. Error categories for **unnecessary** edits

03 Steps and Requirements

⚠ Step 4: Correctness Guideline Callouts

I. Error categories for **incorrect** edits

Error Category	Explanation
Punctuation	Incorrect use of punctuation marks such as commas, periods, apostrophes, quotation marks, colons, semicolons, etc.
Spacing	Incorrect use of white space, including extra/missing spaces between words/characters, or incorrect line/paragraph breaks.
Introduce new errors that alter meanings	The response introduces new inaccuracies or changes the original intended message.
Impede comprehension	The response makes it harder for the reader to understand the content.
Out-of-locale	The response contains elements that are inappropriate or irrelevant for the target region or audience.
Wrong article/preposition use	Incorrect usage of "a," "an," "the," or prepositions like "in," "on," "at," etc.
Voice alteration	The grammatical voice (active/passive) of a sentence is changed unnecessarily or incorrectly.
Formality alteration	The level of formality in the text (e.g., formal, informal) is changed inappropriately.
Word choice alteration	Words are replaced with synonyms or different terms.
Change level of code-switching	The response does not match the level of language mixing or code-switching in the input text.
Register alteration	The style, script, or dialect of language is changed.
Other	Any other error not covered by the above categories. Please explain.

navigate to another section.

* Introduction * I. Minimal Edit Principle * II. Principles for Handling Ambiguous or Informal Contexts
* Step 1 * Step 2 * Step 3 * Step 4 * Step 5 * Appendix
Local-Specific Guidelines * Japanese * Arabic Language * Hinglish

03 Steps and Requirements

⚠ Step 4: Correctness Guideline Callouts

II. Error categories for **unnecessary** edits

Error Category	Explanation
Punctuation change that does not touch on syntax, expressivity, or the meaning of the input text	Altering punctuation when the original was correct and the change offers no grammatical improvement.
Optional capitalization	Changing capitalization when both the original and new forms are grammatically or stylistically acceptable.
Spacing	Modifying spacing (e.g., extra/missing spaces) when the original was already correct or within acceptable norms.
Mechanical issues that may affect how a sentence is expressed	Subjective stylistic changes to grammar, articles, spelling, or phrasing that do not correct a clear error.
Incorrect handling of abbreviations	Inappropriately changing abbreviations (e.g., expanding when not needed, using an incorrect form, or failing to expand as required by the guidelines).

Select the Chapters to
navigate to another section.

* Introduction * I. Minimal Edit Principle * II. Principles for Handling Ambiguous or Informal Contexts
* Step 1 * Step 2 * Step 3 * Step 4 * Step 5 * Appendix
Local-Specific Guidelines * Japanese * Arabic Language * Hinglish

03 Steps and Requirements

Q3-1: "Did any edits alter the original meaning, tone, style, or register?" - Examples

	Input Text	Response	Correct Answer	Rationale
1	The apple was eaten by John yesterday at lunch by the window.	John ate the apple by the window at lunch yesterday.	Yes, at least one edit altered the original meaning, tone, style, or register.	The input is grammatically fine, but it sounds awkward because of the double "by" phrase and clunky word order. The style and fluidity of the response is improved; however, that's beyond the scope of the Proofread feature. The automatically derived score of this response would be 😞 Poor.
2	Hey, can you let Andrew know I can't make the call today? Thanks, Faye	Hey, can you let Andrew know I cannot make the call today? Thanks, Faye	No, none of the edits altered the original meaning, tone, style, or register.	The response expands the contractions ("can't" → "cannot"). This doesn't really change the meaning, tone, or style of the input; however, it fails to preserve the original expressive elements. The automatically derived score of this response would be 😐 Fair.
3	Hi Sneha! Lunch tomorrow???	Hi, Sneha, Lunch tomorrow?	No, none of the edits altered the original meaning, tone, style, or register.	The response changes the expressive punctuation ("Hi Sneha!" → Hi, Sneha," ; "???" → "?") These don't really change the meaning of the input, but this change violates the rule to preserve style and expressivity (how meaning is expressed). The automatically derived score of this response would be 😐 Fair.

03 Steps and Requirements

Q3-2: "Are all the edits in the response necessary?" - Examples

Input Text	Response	Correct Answer	Follow-up Questions	Rationale
The team have been working hard on the project, it's almost complete.	The team has been working hard on the project; it's almost complete.	Yes, all edits in the response are necessary.	Follow-up question: For the necessary edits only, are they all correct? Yes, all necessary edits are correct	This response corrects two grammatical errors in the input text: - It corrects the subject-verb agreement from "team have" to "team has". - It fixes the comma splice by replacing the comma with a semicolon.
	The team has been working diligently on the project, and it's nearing completion.	Mixed, only some edits are necessary.	Follow-up question 1: For the necessary edits only, are they all correct? - Yes, all necessary edits are correct. Follow-up question 2: Select what best describes the unnecessary edits. - One or more unnecessary edits altered the core content, style, or tone.	This response corrects the necessary grammatical errors ("has" and the comma splice). However, it also introduces stylistic changes that are not necessary for grammatical correctness: - Adding the adverb "diligently". - Replacing "almost complete" with "nearing completion"
	The team have been working tirelessly on the project, its nearly finished.	No, all edits are unnecessary.	Follow-up question 1: Select what best describes the unnecessary edits. One or more unnecessary edits altered the core content, style, or tone	This response does not correct the existing grammatical errors ("team have" and the comma splice). Instead, it makes purely stylistic changes: - It replaces "hard" with "tirelessly". - It replaces "almost complete" with "nearly finished". Since none of the edits address the grammatical mistakes, they are all considered unnecessary. - It also introduces a new error ("it's" → "its")

Select the Chapters to navigate to another section.

03 Steps and Requirements

Q3-2: "Are all the edits in the response necessary?" - Examples

⚠ **Do NOT expand** common abbreviations of longer words. These are typically intentional and function as words in their own right; keep them as written (including casing and punctuation). This also applies to abbreviated slurs/insults and widely used internet slang.

Input Text	Response	Correct Answer	Follow-up Questions	Rationale
btw that meeting were great, idk if you agree?!	btw, that meeting was great. idk if you agree?!	Yes, all edits in the response are necessary.	Follow-up question: For the necessary edits only, are they all correct? Yes, all necessary edits are correct.	This response makes two necessary edits according to the guidelines: - It corrects the subject-verb agreement from "meeting were" to "meeting was". - It fixes the comma splice. According to the Informal Word Lists, "btw" and "idk" can appear in both upper case and lower case versions. So it is correct for the response to preserve the style.
	By the way , that meeting was great. Idk if you agree.	Mixed, only some edits are necessary.	Follow-up question 1: For the necessary edits only, are they all correct? - Yes, all necessary edits are correct. Follow-up question 2: Select what best describes the unnecessary edits. - One or more unnecessary edits altered some mechanical aspects of the original text.	This response attempts make necessary edits. - It corrects the subject-verb agreement from "meeting were" to "meeting was". - It fixes the comma splice by adding a period. However, it also expands "btw" to "By the way" and capitalizes "Idk." These edits are not necessary. Additionally, it changes the expressive punctuation ("?!") to a period, which is not necessary as Proofread feature aims to preserve the original tone and style.

* Introduction * I. Minimal Edit Principle * II. Principles for Handling Ambiguous or Informal Contexts
* Step 1 * Step 2 * Step 3 * Step 4 * Step 5 * Step 6 * Appendix
Local-Specific Guidelines * Japanese * Arabic Language * Hinglish

03 Steps and Requirements

Step 5: Evaluate the Completeness Dimension of the Response

You will only be prompted to evaluate the Completeness of a response if you have made these selections in Step 2:

- Q1. Is the input text grammatically correct? - **No**
- Q2. Did the assistant make changes to the input? - **Yes**

Question

How completely does the response catch all errors that require correction?

- Complete - Identifies all errors
- Nearly Complete - Misses only a small portion (fewer than 20%, such as 1 out of 6)
- Partial - Misses a significant portion (20% or more, such as 2 out of 5)
- Incomplete - Misses most or all errors

When you select Nearly, Partial or Incomplete, you'll also need to categorize the uncorrected or improperly corrected errors in the response

- Incorrect handling of abbreviations
- Awkward and unnatural edits
- Punctuation and formatting issues that do not impede comprehension
- Punctuation and formatting issues that impede comprehension
- Common grammatical mix-ups
- Spelling errors
- Incorrect word usage that changes meaning or causes grammatical errors
- Other. Briefly describe the errors.

* Introduction * I. Minimal Edit Principle * II. Principles for Handling Ambiguous or Informal Contexts
* Step 1 * Step 2 * Step 3 * Step 4 * Step 5 * Step 6 * Appendix
Local-Specific Guidelines * Japanese * Arabic Language * Hinglish

! Step 5: Completeness Guideline Callouts

1. The intent behind the Completeness dimension

- Unlike Correctness, which focuses on the necessity and correctness of an edit, Completeness is intended to verify whether the response **successfully detects all errors**.
- When evaluating Completeness, focus on whether the original errors in the Input are detected / corrected. If the response introduces a new error, that would be penalized under Correctness.

2. Derived scores will be visible to you

Different derived scores for Completeness will be displayed for you, depending on your answers to each question and its follow-ups. There will be 4 scales:

- **Excellent**
- **Good**
- **Fair**
- **Poor**

You won't need to provide or engage with these scores explicitly (because they are automatically computed), but they are displayed for your reference. You will base the pairwise comparison later on these derived scores.

⚠

Step 5: Completeness Guideline Callouts

3. Brief explanations for the error categories

When you select "No, one or more errors in the input remain uncorrected or improperly corrected," a list of error categories will surface. Refer to the table below to guide your selections.

Error Category	Explanation
Incorrect handling of abbreviations	Inappropriately changing abbreviations (e.g., expanding when not needed, using an incorrect form, or failing to expand as required by the guidelines).
Awkward and unnatural edits	The response reads poorly, sounds unnatural, or lacks the idiomatic flow of native language.
Punctuation and formatting issues that do not impede comprehension	Errors in punctuation or text formatting that do not significantly hinder the reader's ability to understand the content.
Punctuation and formatting issues that impede comprehension	Errors in punctuation or text formatting that make the content difficult to understand or lead to misinterpretation.
Common grammatical mix-ups	Frequent or basic grammatical errors such as subject-verb agreement, pronoun errors, incorrect tense usage, or sentence structure issues.
Spelling errors	Incorrect spellings of words.
Incorrect word usage that changes meaning or causes grammatical errors	Using a word that is semantically wrong for the context, alters the intended meaning, or creates a grammatical fault in the sentence.
Other	Any other error not covered by the above categories. Please explain.

Q4: Are all errors in the input found and corrected in the response? - Examples

Input Text with grammatical errors	Response	Correct Answer	Rationale
The team have been working hard on the project, it's almost complete.	The team has been working hard on the project; it's almost complete.	Complete - Identifies all errors	The response correctly identifies and fixes the subject-verb agreement by changing "have" to "has". It also properly corrects the comma splice by replacing the comma with a semicolon. All original errors were found and corrected.
	The team has been working diligently on the project, and it's nearing completion .	Complete - Identifies all errors	The response correctly identifies and fixes the subject-verb agreement by changing "have" to "has". It also addresses the comma splice by adding the conjunction "and" after the comma. All original errors were found and corrected . Note: While the response also includes stylistic changes ("diligently," "nearing completion"), this aspect violates the Minimal Edit Principle and would be downgraded under Correctness.
	The team have been working tirelessly on the project, its nearly finished .	Incomplete - Misses most or all errors	The response fails to correct the original subject-verb agreement error, leaving "team have" as is. The response also fails to detect the comma splice error. None of the original errors are detected / fixed. Note: The response introduces a new error by changing the correct contraction "it's" (from the input) to the incorrect possessive pronoun "its". This would be penalized under Correctness.

Q4: Are all errors in the input found and corrected in the response? - Examples

⚠ **Do NOT expand** common abbreviations of longer words. These are typically intentional and function as words in their own right; keep them as written (including casing and punctuation). This also applies to abbreviated slurs/insults and widely used internet slang.

Input Text with both both SMS abbreviations and grammatical error	Response	Correct Answer	Rationale
btw that meeting were great, idk if you agree?!	btw, that meeting was great. idk if you agree?!	Complete - Identifies all errors	The response successfully corrects all targeted errors. It fixes the subject-verb agreement error by changing "were" to "was." It also fixes the comma splice. In this context, the ending punctuation "?!" is treated as an expressive choice to convey tone rather than a grammatical error, so retaining it is acceptable. All original errors were found and corrected.
	By the way , that meeting was great. Idk if you agree.	Complete - Identifies all errors	The response successfully corrects all targeted errors. It fixes the subject-verb agreement error by changing "were" to "was." It also fixes the comma splice. Note: the response unnecessarily expands the abbreviations and changes the expressive punctuation "?!" to a period, which is considered as altering style and tone. This would be penalized under Correctness. As for Completeness, the original errors were all found and corrected.

3. Correct These Misspelled Abbreviations - Part 1

- The following is a list of commonly misspelled abbreviations.
- The table shows how they should be corrected, rather than extended.

Word/Abbreviation/ Acronym/Etc.	Correct Spelling	Written out + Back Translation	Comments
atm	ATM	automated teller machine	This requires a contextual understanding from the tool, but we feel it's important to flag that lower-case 'atm' can only mean 'at the moment', while upper-case 'ATM' means the place to take money out... If we were proofreading something that didn't follow this logic, we would correct it.
ATM	atm	at the moment	
eg. / EG.	e.g.	From the Latin: "exempli gratia", which means "example"	In addition to correcting the spelling of these, we feel it would be ideal if the tool can also understand the context and correct the misuse of either 'e.g.' or 'i.e.' as some people mix these up, or use them interchangeably. <u>Mark Daniels</u> - just added this for now, would like your thoughts. Open to removing or changing
ie. / IE. ie / IE	i.e.	From the Latin: "id est", which means "that is" or "in other words". It's used to clarify or provide a more specific explanation of something that was previously stated.	
etc / ETC.	etc.	etcetera (and so on)	Should be lower-case and have a full stop

04 Appendix — Informal Context Word Lists

3. Correct These Misspelled Abbreviations - Part 2

- The following is a list of commonly misspelled abbreviations.
- The table shows how they should be corrected, rather than extended.

Word/Abbreviation/ Acronym/Etc.	Correct Spelling	Written out + Back Translation	Comments
faq / FAQ	FAQ	Frequently Asked Questions	Should be capitalised
fyi / FYI	FYI	for your information	Should be capitalised
goat / GOAT	GOAT	greatest of all time	Should be capitalised Requires contextual understanding, but is usually preceded by 'the' (but then again, so are normal goats).
mot / MOT	MOT	Officially stands for "Ministry of Transport" but usually refers to the annual test all cars over 3 years old must have. E.g.: "My car failed it's MOT"	Should be capitalised
mo	MO	modus operandi	Should be capitalised, but shouldn't be confused with 'mo', which is short for 'moment'. E.g.: "I'll be back in a mo"
nda / NDA	NDA	non-disclosure agreement	Should be capitalised

3. Correct These Misspelled Abbreviations - Part 3

- The following is a list of commonly misspelled abbreviations.
- The table shows how they should be corrected, rather than extended.

Word/Abbreviation/ Acronym/Etc.	Correct Spelling	Written out + Back Translation	Comments
re. / RE.	re re: / RE:	regarding	re' is the correct spelling according to the OED, but we feel this goes against modern usage and norms, as it is an abbreviation and these are typically marked by punctuation. As such, we ask that the Proofread tool respects the user's input between 're:', 'RE:' and 're'. If, however, there's a full-stop in the input, this should be changed to a colon. e.g.: "Did you see my email re. the party?" should be changed to "Did you see my email re: the party?" But, "Did you see my email re the party?" should remain the same.

05

Locale-specific Guidelines

We have provided specific guidelines for some locales, given that what counts as "unnecessary edits" can vary across languages and cultures.

Please be sure to align with the locale-specific guidelines and refer to the grading framework under each dimension to make your evaluation.

Currently, the locales below have specific guidelines:

- Japanese
- Arabic
- Hinglish

05 Locale-specific Guidelines

Japanese Guidelines (ja_JP)

There are some complex areas in the Japanese language:

- **Script:** The Japanese writing system uses a combination of three scripts: Hiragana, Katakana, and Kanji. While some flexibility exists, many words and phrases have a standard script they are most commonly and appropriately written in.
- **Tone:** Tone in Japanese is crucial for conveying the appropriate level of politeness (e.g., casual, polite, and formal/honorific). This is not just about word choice; it is built into the grammar and directly affects how verbs and adjectives are conjugated.
- **Conjugation:** Japanese verbs and adjectives change their endings (conjugate) to express tense (past/present), politeness, and mood (e.g., conditional, imperative).

! Guideline Callouts

To account for the complexity and adhere to **Minimal Edit Principle**, review the table below to understand what counts as necessary correction for Proofread - Japanese.

Type of Change	Necessary (Allowed) Correction	Unnecessary (Disallowed) Modification
Script Usage	Corrects a word or phrase written in a script that is not its usual form (e.g., a word commonly written in Kanji is written in Hiragana).	Changes the script of a word or phrase that is already written in a correct and acceptable script.
Tone	Corrects a clear disagreement between the tone of the text and the verb or adjective conjugations.	Changes or refines the tone when the original text is grammatically correct.
Conjugation	Corrects an obvious grammatical error in verb or adjective conjugation (e.g., wrong tense).	Changes a verb form that is grammatically correct but sounds "slightly unnatural."

Japanese Guidelines (ja_JP) - Examples of Change in Script

User Request	Response	Initial Assessment	Correctness	Completeness	Comment
池のほとりに花 ショウブが綺麗 に咲いていまし た。	池のほとりに 花ショウブが きれいに咲い ていました。	Q1. Does the input text contain errors that hinder comprehension or readability, considering its intended formality level? No errors. Q2. Did the assistant make changes to the input? Yes, the response is different from the input.	Did any edits alter the original meaning, tone, style, or register? Yes, at least one edit altered the original meaning, tone, style, or register.	You won't need to rate Completeness in this scenario. The dimension would be computed to show Completeness is 😐 fair.	Both 綺麗 and きれい are commonly used. Changing 綺麗 to きれい or きれい to 綺麗 is considered as an unnecessary edit.
軟木の絶縁され た部屋およびよ いヒーターはサ ウナのための ぜったい必要で ある。	軟木の絶縁され た部屋およびよ びよいヒー ターはサウナ のための絶対 必要である。	Q1. Does the input text contain errors that hinder comprehension or readability, considering its intended formality level? Yes - The input contains errors that hinder comprehension or readability. Q2. Did the assistant make changes to the input? Yes, the response is different from the input.	Are all the edits in the response necessary? Yes, all edits in the response are necessary. Follow-up: For the necessary edits only, are they all correct? Yes, all necessary edits are correct.	How completely does the response catch all errors that require correction? Complete - Identifies all errors	The word 絶対 is usually written in Kanji, but it is incorrectly written in Hiragana in the input text. The response makes the correction, which is considered as a grammatical fix.

Japanese Guidelines (ja_JP) - Examples of Change in Tone

User Request	Response	Initial Assessment	Correctness	Completeness	Comment
先生、今日は天気が最高だぞ	先生、今日は天気が最高ですね	Q1. Does the input text contain errors that hinder comprehension or readability, considering its intended formality level? No errors. Q2. Did the assistant make changes to the input? Yes, the response is different from the input.	Did any edits alter the original meaning, tone, style, or register? Yes, at least one edit altered the original meaning, tone, style, or register.	You won't need to rate Completeness in this scenario. The dimension would be computed to show Completeness is 😐 fair.	The input text sounds casual but is grammatically correct. The response modifies the tone and makes it more formal, which is an unnecessary modification.
田中さんが申し上げた通り、そちらは仕様となっております	田中が申し上げた通り、そちらは仕様となっております	Q1. Does the input text contain errors that hinder comprehension or readability, considering its intended formality level? Yes - The input contains errors that hinder comprehension or readability. Q2. Did the assistant make changes to the input? Yes, the response is different from the input.	Are all the edits in the response necessary? Yes, all edits in the response are necessary. Follow-up: For the necessary edits only, are they all correct? Yes, all necessary edits are correct.	How completely does the response catch all errors that require correction? Complete - Identifies all errors	The input text shows erroneous inconsistency in tone and expressions. “申し上げた” is a form of 謙譲語 (humble language) and its subject can't have any honorific suffix like “さん” or “様”. The response makes the correction by making the tone, verb conjugation, and expression aligned.

Arabic Guidelines for Modern Standard Arabic (MSA) and Arabic Dialects

For MSA and Arabic dialects, the **Minimal Edit Principle** applies. The response should preserve the tone, style, and register of the input text.

- If an input text is written in an Arabic dialect or a mixture of MSA and a dialect, the output should preserve the original register and corrects grammatical errors only.
- Change in register or formality is considered a violation of the Minimal Edit Principle and should be penalized.

This task requires your attention to the authenticity of the response in the respective dialect. To learn more about it, refer to the Authenticity in Syntax and Morphology table at the end of this section [1].

! Guideline Callouts

Given that Arabic communities use both MSA and dialects, we'd like to call out some grading rules to align your expectations with the engineering team.

1. When an input is written in an Arabic dialect, the response (output) should reflect the common, standardized practices of native speakers of that dialect.
2. The response should always preserve dialect variations in the input text, including phonetic variations. If the input text contains the phonetic variations in dialect, the response should not modify them. This is considered unnecessary modifications.

When a response does not meet any of these requirements, it should be penalized.

* Step 1 * Step 2 * Step 3 * Step 4 * Step 5 * Step 6 * Appendix
Local-Specific Guidelines * Japanese * Arabic Language * Hinglish

Arabic Guidelines for Modern Standard Arabic (MSA) and Arabic Dialects

! Guideline Callout 1

When an input is written in an Arabic dialect, the response (output) should reflect the common, standardized practices of native speakers of that dialect.

- This rule speaks to the common or standardized way of writing a language, encompassing spelling, punctuation, and capitalization (also known as orthography).
- The response in dialect should reflect the common orthographic practices of native speakers of that dialect.

Examples

For example, certain phonetic representations are not typically written, so the response is not expected to include them.

These phonetic representations include the letter ف for the /v/ sound.

Arabic Guidelines for Modern Standard Arabic (MSA) and Arabic Dialects

 **Guideline Callout 2**

The response should always preserve dialect variations in the input text.

- The output must preserve informal writing styles found in the input, including slang, common typos, and dialect
- The response in dialect should reflect the common orthographic practices of native speakers of that dialect.

Example 1 - Phonetic Variations This table shows phonetic variations across Arabic dialects (ex: Gulf Arabic, Levantine Arabic, etc). In Gulf Arabic: - ج (j) may soften to ي (y) in - ق (q) is often pronounced /g/ or /dʒ/. - Female suffixes often shift ك (k) → ج (dj) (e.g., عساج). In Levantine Arabic: - ث (th) often becomes ت (t). - ق (q) is pronounced as a glottal stop /ʔ/ in urban varieties	Sound	MSA	Gulf Arabic	Levantine Arabic
	ج (j)	/dʒ/ as in ماجد (Mājid)	→ ي /y/ in some Gulf accents مايد (Mayed)	—
	ق (q)	/q/ as in قدر (Qidr)	→ ج /dʒ/ or /g/ in Gulf (varies: e.g. Emirati) جدر (Jidr, Gulf)	Qal → ʔ (glottal stop) in Levantine ʔāl
	ك (k)	/k/ as in عساک (ʿasāk)	→ ج /dʒ/ or j when addressing females عساج (ʿasāj) (Gulf female)	—
	ث (th)	/θ/ as in كثير (kثیر)	—	→ ت /t/ کتیر (kteer)

 If the input contains the phonetic variations in dialect, the output should not modify them.

05 Locale-specific Guidelines

Arabic Guidelines for Modern Standard Arabic (MSA) and Arabic Dialects

! Guideline Callout 2

The response should always preserve dialect variations in the input text.

- The output must preserve informal writing styles found in the input, including slang, common typos, and dialect
- The response in dialect should reflect the common orthographic practices of native speakers of that dialect.

Example 2 - Numbers and Diacritics

- In Arabic, users use two forms of numbers; Western Arabic (123) and Eastern Arabic (١٢٣). **The numerals in the response should match the input text. If not, please penalize the response.**
- There are 2 tanween (diacritic) practices in Arabic: 1) the tanween falls on the last letter استناداً or 2) on the letter before the last استناداً. The response should match the input. **If not, please penalize the response.**

Arabic Guidelines for Modern Standard Arabic (MSA) and Arabic Dialects

Reference [1]: Authenticity in Syntax and Morphology

The goal of the Proofread feature is to make grammatical corrections while preserving the intent, style, and dialectal authenticity of the input. To meet this goal, you can rely on common dialectal verb and noun phrases to help you assess if the response effectively preserves authenticity of the input text.

	Dialect	Phrase
1	Emirati	ما سويت (ma sawwēt)
	Saudi	ما سويت (ma sawwēt)
	Levantine	ما عملت (ma ‘melt)
	Egyptian	ما عملتش (ma ‘malt-esh)
	Maghrebi	ما درتش (ma dertsh)
2	Emirati	هذا ما ينفع (hāḍa ma yinfa‘)
	Saudi	هذا ما ينفع (hāḍa ma yinfa‘)
	Levantine	هادا ما بينفع (hēda ma byinfa‘)
	Egyptian	ده ما بينفعش (da ma byinfa‘sh)
	Maghrebi	هاد ما كاينفعش (hād ma kaynfa‘sh)

05 Locale-specific Guidelines

Hinglish Guidelines (hi_LATN)

Hinglish is a blend of Romanised Hindi and English. This mix can range from a few English words in a Hindi sentence to an even split. Your corrections should result in a Hinglish output that **mirrors the tone and level of code-switching present in the input**.

For Hinglish, the **Minimal Edit Principle** applies. The response should preserve the tone, style, and register of the input text. The goal is to refine Hinglish text by correcting clear errors while respecting its nature as a mixed language.

Note

Given that Hinglish includes both Indian English (en_IN) and Hindi Devanagari, below are the expectations for outputs / responses generated by the model:

- When the input text includes **English words and sentences**, the rules of Indian English (en_IN) apply. This includes correcting clear spelling errors.
- When the input text includes **Hindi Latin words and sentences**, the grammatical rules of Hindi Devanagari apply, simply transliterated into the Latin script.
- **Word Variations:** Multiple accepted spellings for a Hindi Latin word are permissible as long as they are phonetically correct and not overly shortened chat-speak. A good response should correct clear errors, not to enforce a single stylistic choice among several valid ones.
- **Important:** There should be no Devanagari present in a response, **unless the input text has any**. If this occurs, please penalize the response.
- **Skip the task:** If the input text is largely in Devanagari Hindi (ex: आज का वातावरण बहुत खराब है kal accha tha.), please click on Skip the Current Task and select "The language or content in the input text is not typical of this locale."

Local-Specific Guidelines * Japanese * Arabic Language * Hinglish

05 Locale-specific Guidelines

Hinglish Guidelines (hi_LATN)

! Guideline Callout 1

Correct common misspellings to their standard phonetic form.

An output should correct words that are phonetically misspelled to their more accurate and common Latin script representation. The goal is to correct clear typos or non-standard spellings, not to choose between two acceptable variations.

User Request	Response	Initial Assessment	Correctness	Completeness	Comment
Hello, m Abhishek Sharma aapka fridge repair krne ke liye aaj shaam aaunga	Hello, mein Abhishek Sharma aapka fridge repair karne ke liye aaj shaam aaunga	Q1. Does the input text contain errors that hinder comprehension or readability, considering its intended formality level? Yes - The input contains errors that hinder comprehension or readability. Q2. Did the assistant make changes to the input? Yes, the response is different from the input.	Are all the edits in the response necessary? Yes, all edits in the response are necessary. Follow-up: For the necessary edits only, are they all correct? Yes, all necessary edits are correct.	How completely does the response catch all errors that require correction? Complete - Identifies all errors	मैं can be written in several forms such as mein/mei/main/m . To align with the feature goal, the model should convert it to the most phonetically correct forms, which are mein or main here. (If the input input contained mai, the output should correct it to main and mei to mein). krne <i>should be corrected to karne</i> since that is more phonetically acceptable.

05 Locale-specific Guidelines

Hinglish Guidelines (hi_LATN)

! Guideline Callout 2

Preserve the tone and code-switching in the input text.

It is critical to preserve the author's original voice. Do not "over-correct" or change the fundamental meaning or tone of the message.

- Words like "tu," "tum," and "aap" (and their variations) carry specific social connotations. Changing them fundamentally alters the relationship implied in the text. The proofread feature must respect this.
- Additionally, mixing English and Hindi (or other languages) is a natural part of how many people communicate. The feature must not translate words from one language to another.

Examples

See next page for examples.

05 Locale-specific Guidelines

Hinglish Guidelines (hi_LATN)

! Guideline Callout 3

Do Not Assume or Change Gender. Fix the incorrect use of gender.

A response should not change the gender indicated in the input. If an input writes "**karti hai**," the response must not change it to "**karta hai**."

- **Use Neutral Forms for Ambiguity:** When the input does not specify a gender, and a neutral form is available, the response should use the neutral form.
 - For example, if an input text doesn't specify gender, the response should not use "**karti hai**" or "**karta hai**." Instead, a correct response would use "**karte .**"
- **Incorrect use of gender should be corrected:** In Hindi, inanimate objects have a grammatical gender. Errors in verb conjugation related to object gender should be corrected to ensure grammatical accuracy.

User Request	Response	Correctness	Comment
Gaadi chal raha hai	Gaadi chal rahi hai	Are all the edits in the response necessary? Yes, all edits in the response are necessary.	"Gaadi" is a feminine object, and the response made the correction.

05 Locale-specific Guidelines

Hinglish Guidelines (hi_LATN)

References

To provide a more robust grading framework, the examples below demonstrate what should be corrected vs what counts as unnecessary changes for Proofread - **hi_LATN (Hindi Latin)**.

1. Correct changes

If an input text contains an error of similar types as listed below, and the response/output makes edits show below, those edits are considered correct and necessary.

2. Unnecessary Changes

As mentioned previously, multiple accepted spellings for a Hindi Latin word are permissible as long as they are phonetically correct and not overly shortened chat-speak. Below are changes that would be considered **unnecessary**. If a response/output unnecessarily modifies how a word is spelled, it would be downgraded under **Correctness**.

- fir ↔ phir
- jaega ↔ jayega ↔ jaayega ↔ jaaega
- Dhanyavaad ↔ Dhanyawad
- Sufi ↔ Soofi
- Pooja ↔ Puja
- Raam ↔ Ram
- Dharm ↔ Dharma

	Incorrect Input	Correct Output
1	Yeh batao ke jaane ka mn h ya nhi	Yeh batao ke jaane ka <u>mann hai</u> ya <u>nahi?</u>
2	vo sb kuch kro jisse tume inspiration milti rhe.	<u>Woh sab</u> kuch <u>karo</u> jisse <u>tumhe</u> inspiration milti <u>rahe/rahey.</u>
3	Ek bda, patla or behtar iphone	Ek <u>bada</u> , patla, <u>aur</u> behtar iPhone.
4	dhyan dein ki sbjiyo ko pakaane se phle achhi tarah dho lein.	<u>Dhyaan</u> dein ki <u>sabziyon/sabjiyon</u> ko pakaane se <u>pehle</u> achhi tarah dho lein.
5	Mene unhe manaa kar diya hai.	<u>Meine/Maine/Mainne</u> unhe manaa kar diya hai.
6	bhut bhook lagi hai!	<u>Bahut/Bohot/Bahot</u> bhook lagi hai!
7	theek-thak ho jaega	<u>T</u>heek-<u>thaak</u> ho jaega
8	thumse kuchh discuss karna hai	<u>Tumse</u> kuchh discuss karna hai.
9	Kya kr rhe ho	Kya <u>kar rahe</u> ho?
10	Vo bol rha tha k tu milne a.	<u>Woh</u> bol <u>raha</u> tha <u>ki</u> tu milne <u>aa.</u>
