

WIP – Writing Tools – Mail Smart Replies

V 1.3
Updated: 2026 May 4

Review Instructions

- The Mail Smart Reply (MSR) feature is similar to Personalized Smart Reply (PSR), with the former focused on emails, and the latter on messages.
- Despite the similarity, the Mail Smart Reply has a different definition for **Groundedness**, given the product specs of this feature. To help you navigate the nuances of Groundedness, we've called out some rules. Pay attention to the Groundedness section and examples to align.
- There are also some additional components for the input text (which PSR doesn't have).

Updates - Please Review

This round of updates focus on **Groundedness** and **Instruction Adherence and Contextual Fit** dimensions — both have a Partial tier now to capture more nuances in the model responses. You can find updates from **p. 33 - p. 56**.

Note that the entire **Instruction Adherence and Contextual Fit** is updated.

Update Summary:

Groundedness

- New "Partially Grounded" tier added — for drafts that are mostly correct but contain minor invented details
- Rule 1 & 2 softened — unverifiable named entities now → Partially Grounded (was Not Grounded)
- Rule 4 expanded — content implied by email type/convention is now explicitly Grounded
- Rule 5 softened — unidentifiable recipient name now → Partially Grounded (was Not Grounded)
- Overview clarified — verbatim match not required to be Grounded
- New and updated examples — to demonstrate how to apply the 3-tier grading scale

Instruction Adherence & Contextual Fit

- New middle tier — Partially Followed and Fit added for drafts with minor gaps in instruction or contextual fit
- Overview rewritten — now gives separate evaluation criteria for emails with and without a prior email
- New grading rules section — concrete criteria added for each rating tier
- New golden example added — to demonstrate how to apply the 3-tier grading scale

In the next slide, we share some tips about these updates.

Updates - Please Review

Tips to succeed at applying these updates to your tasks

Mindset shift

- Think in three tiers — reserve the lowest rating for clear failures only

Groundedness

- Minor invented details + core message intact → Partially Grounded
- Conventions and email-type content → Grounded

Instruction Adherence

- Minor gaps or formality mismatch → Partially Followed, not a full failure
- Prior email? Evaluate both instruction AND contextual fit together

Both Dimensions

- Core intent still recognizable → Partial, not not the lowest grade.

Introduction

Feature Overview

The Mail Smart Reply feature is designed to help users draft emails more efficiently. When a user replies to an email or composes a new email, the feature analyzes the user profile and suggests a complete, ready-to-send draft.

The goal is to provide drafts that are not only accurate and contextually appropriate but also sound authentically like the user who is sending them.

Grading Task

Your task is to evaluate the quality of AI-generated emails to ensure they are helpful, accurate, safe, and personalized.

Depending on whether the user is composing a new email or replying to an input email, you will be presented with a primary input email, a user prompt, user profile, and suggested replies.

- The input email can be empty if the user is composing a new draft.

Your evaluation will follow a structured workflow where you will assess each reply across several key quality dimensions, including 5 generic quality dimensions and 1 personalization dimension.

Step 7 – Compare Responses

Appendix

Introduction

- **Skip the task**
 - if the input or the response is obviously in the wrong language (entire or majority of input is in the wrong language).
 - if you encounter an empty or partially missing profile, which makes the task invalid.
- **Attempt to grade the task** if the input and the response are structurally in the correct base locale, with some words or sentences in foreign language.
 - It's possible that a user engages with an input or a response with intentional foreign text (quotes, names, product names, etc.)
 - Use your best judgement.

Appendix

Steps and Requirements

Step 1. Review the input text

Before evaluating the suggested reply, you must first understand the full context of the conversation. This step is critical for accurately judging the quality of the generated email.

Carefully review the 4 components provided in the tool: **Conversation context**, **Prompt**, **Response Date**, and **Input Email**.

Additionally, review the **User Profile** by clicking "Show Profile." While it's not the major focus for this step, sometimes it may impact your evaluation of Groundedness.

This task is for Mail Personalized Smart Replies feature, please carefully follow the guidelines.
[Mail Personalized Smart Replies Guideline v1.0](#)

Locale: en_US

+ Skip Current Task

Conversation

Relationship:

Professional

Tone:

Professional yet friendly, using greetings and well-wishes alongside business directives.

Structure:

Formal structure with clear salutations, body paragraphs, and professional signatures.

Content:

Focuses on task delegation, scheduling, and logistical coordination for work projects.

Formality:

formal: Uses formal address forms, honorifics, and polite sentence endings throughout.

Prompt

Tell Thomas about the available assignments for next week.

Response Date

03-24-2026, Tuesday

T

Thomas Jamie

Availability for Next Week

To:

Hi Marija,

I'm planning my schedule for the upcoming week and wanted to check in on any new assignments. Please let me know what you have in the pipeline for me.

Thanks,
Thomas

Appendix

Steps and Requirements

Step 1. Review the input text

1. Conversation Context

This section describes how the user's communication style changes based on who they are talking to. It details the Relationship, Tone, Structure, Content and Formality effects the relationship has on their writing.

Important: The entire Conversation Context is extracted from the user's mail profile and represents history content / information this user used to interact with this recipient.

- A user can have different profiles for different recipients because people adapt their style all the time (ex: A user might write formally to their manager but casually to a close colleague).
- Conversation Context section describes general tendencies, not strict rules.
- For the same reason, it's worth noting that the Content field shows history content or info from the past that this user used to interact with this recipient, so it might not always be directly related to the prompt.
 - That said, you may want to consider Content field to help you decide if a response is reasonably derived from the input (which impacts Groundedness).

Steps and Requirements

Step 1. Review the input text

1. Conversation Context

This section describes how the user's communication style changes based on who they are talking to. It details the Relationship, Tone, Structure, and Content effects the relationship has on their writing.

The Relationship category describes **the nature of the user's relationship with the email recipient and its effect on communication style.**

You can expect to see the labels below:

- **Professional:** Colleagues, managers, direct reports, or business contacts in workplace settings
- **Transactional:** Service providers, customer support, vendors, or one-time business interactions
- **Educational:** Teachers, students, academic advisors, or educational institution staff
- **Friends:** Personal friends or close acquaintances
- **Familial:** Family members or relatives

Step 7 – Compare Responses

Appendix

Steps and Requirements

Step 1. Review the input text

2. Prompt

The prompt is the **specific instruction** the user gave to the AI. This is the primary goal that the suggested reply must accomplish.

The generated reply must faithfully follow this instruction.

- For example: "Tell Thomas about the available assignments for next week."

3. Response date

Response date is the date on which the email draft is generated by the model.

4. Input Email

This is the email that the user received and is now replying to. It provides the immediate context for the conversation.

If the user intends to compose a new email, input email field will be empty.

- Read the input email to understand the topic of discussion and any specific questions the recipient asked.
- Analyze the recipient's tone and language. This will help you judge if the suggested reply's tone is appropriate.

5. User Profile

You can find more details about the user profile in **Step 5**. User profile mainly impacts your evaluation of **Personalization**.

However, in some cases, the phrases or information included in a user profile may impact your evaluation of **Groundedness**.

- For example, in the screenshot on the next slide, under the Mail Component Patterns – Closings section, the user tends to use phrases such as
 - "Please let me know if any of these will work for you and if you need travel"
 - "Please let me know if this works for you"
 - "I'll keep you posted."
- If any of the phrases appears in the suggested reply, it is considered grounded and not a hallucination.

Steps and Requirements

Step 2. Assess the Harmfulness of the reply.

When the assistant suggests a reply, you will first evaluate whether the suggested reply is **harmful**.

- Clearly harmful
- Maybe harmful (controversial, sensitive, or debatable)
- Not harmful

If you mark the reply as **clearly** or **maybe harmful**, you won't need to answer the rest of the grading questions for that reply. You will still need to grade other replies and conduct pairwise comparison.

You will only grade the reply if it is **not harmful**.

Steps and Requirements - **Step 3**

Steps and Requirements

Step 3. Verify the quality of the E-mail Subject.

After Harmfulness, the next item you will verify is the email subject. This helps ensure that the user experience of the e-mail subject is consistent.

An ideal e-mail subject should meet **all** of the criteria below.

Question: Check all that apply to the email subject

- ☐ Follow topic + action noun format
 - not prepositional phrases like "Invitation to..."
- ☐ Uses title case
- ☐ No trailing punctuation/emojis
- ☐ Appropriately general (omit extra details)
- ☐ Conveys only ONE main idea
- ☐ Neutral and professional
 - no hype/subjective language

Step 4. Evaluate the generic qualities of the reply.

Overview

In this step, you will evaluate the draft against a set of core principles that every good email should follow, regardless of the user's personal style.

You will grade the reply on 5 distinct dimensions.

Additional Personal Info

In some cases, you will also see **Additional Personal Information** displayed for you.

- The field displays personal information or context that the model is able to retrieve from the user's device.
- Additional Personal Information field will mainly impact your assessment of **Groundedness**.
- Important: In the same task, you can expect to see one response has Additional Personal Information, while the others don't. The Additional Personal Info is **specific to each response**, not the task as a whole.
- **When the prompt and additional personal information conflict:** If the prompt (and previous email, if any) contradicts the additional personal information, prioritize the **prompt** and **previous email** across all dimensions when evaluating the response.
 - For example, if the prompt says "Schedule a meeting with Octavio" but the additional personal information shows a meeting is already scheduled, a response that proceeds to schedule the meeting should be evaluated as adhering to the instruction / fitting context.

Step 4. Evaluate the generic qualities of the reply.

Generic Quality Dimensions

DIMENSION	DESCRIPTION
Groundedness	Groundedness ensures the reply does not invent unrelated or irrelevant factual information. The draft must be based on the content of the instruction, additional personal information (if any), the previous email (if any), and user profile. Information is considered grounded if it can be directly traced to or reasonably derived from the instruction or previous email — even if the exact wording does not appear verbatim in the source.
Instruction Adherence & Contextual Fit	Instruction Adherence & Contextual Fit measures how accurately and faithfully the draft applies the user's instruction while being contextually appropriate for the email conversation. • If a previous email exists, the draft should address the previous mail's key points and maintain thematic coherence and formality. • If no previous email exists, the draft should faithfully fulfill the user's instruction.
Tone & Empathy Alignment	Tone & Empathy Alignment assesses if the reply's tone matches the situation. The tone should align with the professional or personal context and the recipient's expressed feelings.
Naturalness	Naturalness judges if the reply sounds like a real person would write it. The language should flow naturally and avoid awkward or robotic phrasing.
Localization	Localization measures whether the suggested reply contains elements that are inappropriate or irrelevant for the target region or audience.

Individual Dimensions and Examples

Evaluate Each Dimension Independently

It is possible for a suggested email reply to include fabricated details (**Not Grounded**) while still fitting into the conversation (**Contextually Fitting**) or showing empathy (**Aligned**).

!! Because of this nuance, please make sure to evaluate each dimension independently of one another.

Groundedness

Overview

Groundedness ensures the reply does not invent unrelated or irrelevant factual information. The draft must be based on the content of the instruction, additional personal information (if any), the previous email (if any), and user profile.

Information is considered grounded if it can be directly traced to or reasonably derived from the instruction or previous email or user profile — even if the exact wording does not appear verbatim in the source.

Given product spec of Mail Smart Reply, there are more nuances to its Groundedness dimension. Review the Groundedness decision rules and examples below to align

Steps and Requirements

Step 4. Evaluate the generic qualities of the reply.

Groundedness

Grading Question and Scales

Q. Is the suggested draft for Response A grounded in the instruction, previous mail (if any) and user profile?

- **Grounded:** All information in the suggested draft can be traced back to, or reasonably derived from, the instruction, previous mail (if any), or user profile.
- **Partially Grounded:** The primary content of the draft aligns with the instruction, previous mail, or user profile, but contains minor additions or slight offsets – small invented details that do not alter the core message or introduce a new topic
- **Not Grounded:** The draft contains information that is irrelevant to, or not derivable from the instruction, previous mail (if any), or user profile, either altering the core message or introducing a new topic.

- We do not want to penalize replies for using standard, polite email phrases or for elaborating in ways that are a reasonable, direct extension of what was asked.
- Common professional conventions and logically derived details are acceptable as Grounded.

Groundedness

Groundedness Decision Rules

To align with engineering intent, it's important to understand what counts as "reasonable" and "grounded" for this feature. When evaluating Groundedness, apply the rules below:

Rule 1: Named entities must be verifiable; non-named invented specifics may result in a Partially Grounded response.

If the draft names a specific entity — a place, person, restaurant, park, city, date, or time — check whether it appears in the instruction, additional personal information field, prior email, or a verifiable source (e.g., web search result).

If it cannot be verified, and considering the content of the draft aligns with the core message, rate Partially Grounded.

For example:

- *"Brunch at the Riverside Bistro at 11am"* → **Partially Grounded** (*unverifiable name and time*)
- *"Brunch at a restaurant she loves"* → **Grounded** (*placeholder, no specific claim*)

Naturalness

Localization

Step 5 – Review User Profile

Step 6 – Evaluate Personalization

Step 7 – Compare Responses

Appendix

Steps and Requirements

Step 4. Evaluate the generic qualities of the reply.

Groundedness

Rule 2: Suggestions and brainstorming allow creative freedom — but no named specifics.

If the draft is clearly offering suggestions (the model acknowledges it is generating ideas, or the instruction was open-ended), creative content is acceptable as long as it does not assert specific unverifiable facts.

Generic activity categories are fine; named specifics are not.

- *"Maybe a walk in the park or some time outdoors"* → **Grounded** (generic)
- *"A visit to the Sunfield Botanical Garden"* → **Partially Grounded** (specific, unverifiable)

Rule 3: Penalize impractical suggestions as Not Grounded

Even within creative freedom, rate **Not Grounded** if a suggestion is clearly impractical given the available context — for example, recommending an outdoor picnic in a weather-dependent plan with no qualifier, or suggesting a same-day international trip in a casual email.

- **Ask yourself:** would a reasonable person reading the instruction consider this suggestion actionable?

Step 4. Evaluate the generic qualities of the reply.

Groundedness

Rule 4: Standard professional conventions and reasonable elaborations are Grounded

Do not penalize replies for standard, polite email language or details that are reasonable, direct elaboration of the instruction — even if not explicitly stated.

In addition, content that is contextually implied by the type or purpose of the email is also Grounded, even if not stated explicitly in the instruction.

- Some statements are not derivable word-for-word from the prompt but are conventional or expected given the kind of email being written — for example, an encouragement email to someone starting a new business may reasonably include “The market is tough, but if anyone can make it work, it’s you.”
- This is a conventional framing appropriate to this email type, not an invented fact. Similarly, a post-interview thank-you may include “It was a wonderful conversation” as a standard convention for that email type.

Step 7 – Compare Responses

Appendix

Steps and Requirements

Step 4. Evaluate the generic qualities of the reply.

Groundedness

Rule 5: Recipient name should be established in the prompt or previous email (if any)

- The recipient name in a response would be considered grounded if you can identify it in the **prompt** or **the previous email**.
- This means that if the user profile shows different names in the Address Forms field, prioritize the **prompt** and **the previous email**, since the user profile shows a tendency and you may not be able to confirm if the names in the Address Form field refers to the actual recipient.
- If the recipient's name cannot be identified in anywhere of the input text (prompt, previous email, user profile, or additional information field), rate the response as **Partially Grounded** (considering the primary content of the draft aligns with the core message).
 - *For example: If the prompt says “Let them know the application is under review” and the input email is unsigned, a reply that opens with “Hi Emily,” is **Partially Grounded** — the core message is delivered, but the name “Emily” cannot be traced to any input source.*

Step 4. Evaluate the generic qualities of the reply.

Groundedness

Rating Guidelines

Rate as GROUNDED:

- Pleasantries: "Hope you are doing well," "Thanks for your email."
- Standard Greetings & Closings: "Hi," "Hello," "Best regards," "Thanks."
- Conventional openers that acknowledge the prior exchange in a generic way — e.g., "Thanks for the update," "Thanks for checking in" — are Grounded, even if not traceable to specific content in the previous email.
- Details that are reasonable, direct elaboration of the instruction or prior email — even if not explicitly stated.
 - Instruction: "Thank Elizabeth." → Draft includes "Thank you for your help." — **Grounded**. Thanking someone for their help is a direct, reasonable interpretation of the instruction to thank them.
 - Instruction: "Ask Gavin for his availability for an interview and outline the next steps in the hiring process." → Draft includes "After this initial interview, we will review the candidates and select a shortlist for a second round of interviews with the wider team." — **Grounded**. This is a reasonable, directly derived description of hiring next steps as requested by the instruction.

Localization

Step 5 – Review User Profile

Step 6 – Evaluate Personalization

Step 7 – Compare Responses

Appendix

Steps and Requirements

Step 4. Evaluate the generic qualities of the reply.

Groundedness

Rate as **PARTIALLY GROUNDED**:

- The draft correctly addresses the main request but includes **a few minor invented details that are not derivable** from the context and do not significantly change the message.
 - Instruction: "Let the team know the project kickoff meeting is confirmed." → Draft correctly confirms the meeting but adds "the meeting will last approximately one hour" — Partially Grounded. The core message is correct, but the duration is an invented detail not present in the instruction.
 - Instruction: "Follow up with Sarah about the budget report." → Draft appropriately follows up but mentions "as we discussed last week" — Partially Grounded. The follow-up is grounded, but the specific time is fabricated.

Rate as **NOT GROUNDED**:

- Information that is not relevant to or derivable from the instruction or previous email, especially when it affects the primary message.
 - "The deadline is Friday." (Invented fact unrelated to the instruction)
 - "I've already scheduled the meeting." (Invented action not derivable from context)
- A draft that introduces a topic entirely unrelated to the instruction is **Not Grounded** — even if the primary content of the instruction is also present in the reply.

Groundedness

	Suggested Reply	Grade	Rationale
1	Hi Thomas, Thanks for checking in. For next week, we have two new assignments available for you: the new marketing banner and the social media campaign. Best, Marija	✅ Grounded	This reply is Grounded . Although the phrase "Thanks for checking in" is not in the source text, it is a common professional convention. As explained in the callout above, such phrases are considered acceptable.
2	Hi Thomas, For next week, we have two new assignments for you: the new marketing banner and the social media campaign. The social media campaign will be a great opportunity for your portfolio! Best, Marija	⚠️ Partially Grounded	The core message correctly conveys both assignments as instructed. However, the comment about the portfolio opportunity is an added opinion not derivable from the instruction or email, making this Partially Grounded.

	Suggested Reply	Grade	Rationale
1	Hi Mom, I'm so excited to celebrate Mother's Day with you this year! I've been thinking about what we could do to make it special. Thought we could start the day with a nice brunch at the restaurant we like. After that, we could spend the afternoon doing something fun together, maybe a walk in the park or visiting the botanical garden if the weather is nice. I'm looking forward to spending the day with you. Let me know what you think of this plan! Love, Your Son	Grounded	This draft mail is Grounded. Although "botanical garden" is creative content not mentioned in the instruction, it is a generic, reasonable option to celebrate Mother's Day (no specific name, no specific time).

Groundedness

	Suggested Reply	Grade	Rationale
2	Hi Mom, Glad to hear your recent updates! The Mother's Day is coming, I've booked us a table for lunch at 12pm, followed by tickets to the art exhibition downtown. Love, Your Son	⚠ Partially Grounded	This draft is Partially Grounded given it provided a proper plan for Mother's Day. However, "Glad to hear your recent updates" cannot be derived from the instruction with no previous mail. Additionally, "at 12pm" is a specific time not derivable from the instruction (Rule 1), which also contributes to the Partially Grounded rating. Overall, the core message corresponding to the prompt is delivered correctly.

Step 4. Evaluate the generic qualities of the reply.

Instruction Adherence & Contextual Fit

Overview

The suggested draft should accurately and faithfully apply the user's instruction while being contextually appropriate for the email conversation. It should address the recipient's message (if a previous mail exists), fulfill the user's instruction, and maintain thematic coherence with the email thread.

If a previous mail exists: evaluate whether the draft follows the instruction AND appropriately responds to the previous mail in terms of content, purpose, and formality.

If no previous mail exists: evaluate whether the draft follows the instruction accurately and faithfully, preserving intended meaning, priorities, tone, and constraints.

Step 4. Evaluate the generic qualities of the reply.

Instruction Adherence & Contextual Fit

Grading Question and Scales

Q. Does the suggested draft follow the user’s instruction and fit the email context (if any)?

- **Followed and Fit:** The draft accurately interprets and applies the user's instruction, preserving intended meaning, priorities, and constraints, AND appropriately addresses the previous mail's key points (if any), maintaining thematic coherence and matching the expected formality level. Minor stylistic variations that don't affect the core instruction are acceptable.
- **Partially Followed and Fit:** The draft generally follows the instruction and fits the context, but has minor deviations — such as omitting a secondary element of the instruction, slightly mismatching formality, or addressing most but not all key points from the previous mail. The primary intent is recognizable and largely fulfilled.
- **Not Followed or Misfit:** The draft significantly deviates from the instruction, omits critical elements, contradicts the intended meaning, OR (if a previous mail exists) fails to address the recipient's key points, introduces irrelevant content, or mismatches the appropriate formality level for the context.

Step 4. Evaluate the generic qualities of the reply.

Instruction Adherence & Contextual Fit

Grading Rules

Rate as FOLLOWED AND FIT:

- The draft fulfills all elements of the instruction and responds appropriately to the previous email (if any).
- Minor stylistic differences (e.g., word choice, sentence structure) that preserve the intended meaning are acceptable.
- An empty response when no reply is appropriate (e.g., conversation has concluded, instruction says not to reply).

Rate as PARTIALLY FOLLOWED AND FIT:

- The draft addresses the primary instruction but omits or inadequately covers a secondary element.
- The draft mostly fits the email context but has a minor formality mismatch (e.g., slightly too casual for a formal thread).
- The draft responds to most, but not all, key points raised in the previous mail.
- The core intent of the instruction is recognizable, but execution is incomplete.

Rate as NOT FOLLOWED OR MISFIT:

- The draft omits a critical element of the instruction or contradicts the intended meaning.
- The draft ignores the previous email's main points or introduces irrelevant content.
- The draft has a significant formality mismatch (e.g., casual tone in a formal professional context or vice versa).
- The draft addresses a different topic than what was instructed.

Instruction Adherence & Contextual Fit

	Suggested Reply	Grade	Rationale
1	Hi James, Thanks for following up. I can confirm the Q3 total is \$240,000. There are two outstanding items we still need to resolve: the vendor invoice and travel expenses. I'd suggest we schedule a quick call before Friday to work through these. Best, Sarah	✔ Followed and Fit	All three elements of the instruction are fulfilled (total confirmed, both outstanding items named, call before Friday suggested), and the draft appropriately responds to James's follow-up in a matching professional tone.

Step 4. Evaluate the generic qualities of the reply.

Instruction Adherence & Contextual Fit

	Suggested Reply	Grade	Rationale
2	Hi James, Thanks for following up. I can confirm the Q3 total is \$240,000. There is one outstanding item — the vendor invoice — that we should address. Let me know if you'd like to connect. Best, Sarah	⚠️ Partially Followed and Fit	The primary instruction (confirming the total) is followed and the tone fits the context, but the draft omits the second outstanding item (travel expenses) and does not specify resolving the call before Friday, making it partially complete.
3	Hi James, The Q3 report is still being finalized and figures are not yet available. I'll send them over once ready. Best, Sarah	❌ Not Followed or Misfit	The draft directly contradicts the instruction by suggesting figures are unavailable, when the instruction explicitly states the total to confirm. Critical elements are missing and the response misrepresents the intended message.

Step 4. Evaluate the generic qualities of the reply.

Tone & Empathy Alignment

Overview

Tone & Empathy Alignment measures how well the reply's tone fits the context of the conversation. This includes matching the formality (e.g., professional vs. personal) and, when appropriate, acknowledging the recipient's expressed feelings (e.g., frustration, excitement, concern).

Grading Question and Scales

Q. How well does the suggested draft’s tone align with the email context and recipient’s sentiments?

- **Aligned:** The draft’s tone fully matches the email context (professional, semi-formal, or personal), appropriately acknowledges the recipient’s sentiments, and uses suitable language conventions for the relationship and evaluation.
- **Not Aligned:** The draft’s tone slightly or completely mismatches the email context, uses inappropriate formality level, or fails to acknowledge or respond to the recipient’s feelings.

Step 4. Evaluate the generic qualities of the reply.

Tone & Empathy Alignment

	Suggested Reply	Grade	Rationale
1	Hi Jennifer, I am so sorry to hear about the frustrating delay with your order. It should have shipped by now, and I understand needing it for work. I am looking into the status of order #78952 right now and will get back to you with an update as soon as possible. Best, Support Team	 Aligned	The tone is aligned. It appropriately acknowledges the recipient's sentiments by using empathetic phrases ("so sorry to hear," "frustrating delay," "I understand") that directly mirror the user's frustration.
2	Hi Jennifer, Your order #78952 is in the system. We are investigating its status and will provide an update when one is available. Best, Support Team	 Not Aligned	The tone is not aligned because it completely fails to acknowledge or respond to the recipient's feelings . The reply is cold, robotic, and lacks the necessary empathy, making it inappropriate for the situation.

Step 4. Evaluate the generic qualities of the reply.

Naturalness

Overview

Naturalness measures whether the reply sounds like it was written by a real person. The language should flow smoothly and avoid awkward, stilted, or overly formulaic phrasing. An unnatural reply might sound robotic or use strange sentence structures that a person would not typically write.

Grading Question and Scales

Q. How natural does the suggested draft sound?

- **Natural:** The draft sounds like authentic human email communication with a natural language flow, appropriate structure, and expressions suitable for the context and formality level.
- **Unnatural:** The draft sounds awkward, stilted, or overly formulaic—with forced phrasing, unnatural transitions, or mechanical language that doesn’t resemble authentic email communication.

Naturalness

	Suggested Reply	Grade	Rationale
1	Hi Mark, Sounds good! I'll get my metrics over to you tomorrow. Cheers, Jen	✔ Natural	The reply sounds like authentic human email communication . The language ("Sounds good!", "get my metrics over") is common and has a natural language flow suitable for a casual, internal email.
2	Hi Mark, Your request has been received. The requested metrics will be delivered by tomorrow. Regards, Jen	✘ Unnatural	The reply sounds awkward, stilted, and overly formulaic . Phrases like "Your request has been received" and "will be delivered" are mechanical language that does not resemble how a person would typically respond.

Appendix

Steps and Requirements

Step 4. Evaluate the generic qualities of the reply.

Localization

Overview

The response should feel like it was written by a native speaker in the target region. It adapts to local language, culture, and context.

A response fails the localization dimension if it feels "foreign," even if the grammar is technically correct.

Grading Question and Scales

Q. Does the response display content that is appropriate and relevant for your language and region?

- **Yes:** The response is fully appropriate for my language and region
- **No:** The response contains something inappropriate or irrelevant for my language and region
 - Awkward or clearly machine-translated phrasing
 - Incorrect mixed languages in the response
 - Wrong date format (e.g., MM/DD vs DD/MM), units of measurement, or number formatting
 - Wrong punctuation format for my language/region
 - Scrambled symbols (, □, ???, ?)
 - Content, examples, or references that don't fit my culture/region
 - Others. Please specify.

Guideline Callouts

1. Below scenarios are expected and NOT Localization issues:

- English proper names of companies, products, games, movies, etc **will appear frequently in other languages.**
- Some languages such as Hinglish use mixed languages.
- It’s possible that some scenarios use the base language structurally but include a small untranslated portion.
 - For example, “Send 你好嗎 to Ching Liu.”

2. Examples of wrong punctuation format

- ✗ Cómo estás? Qué sorpresa! **Vs** ✔ ¿Cómo estás? ¡Qué sorpresa!
- ✗ Il a dit "bonjour" en souriant. **Vs** ✔ Il a dit « bonjour » en souriant.
- ✗ Powiedział "to dobrze" i wyszedł. **Vs** ✔ Powiedział „to dobrze" i wyszedł.

Steps and Requirements

Step 5. Review the user profile.

The next step is to understand the user’s authentic communication style. This profile is the primary source of truth for evaluating the personalization of the suggested reply.

A "Personalized" draft should sound like it was written by this person.

The user profile is broken down into three main components: **Writing Style Patterns**, **Grammar/Punctuation**, and **Mail Component Patterns**.

Each user profile can look very different, and not all fields will be populated.

Tips

- For the full label definitions used in the User Profile, you can find them in the Appendix section.
- For ja_JP and ko_KR locale, analysts can expect to see "speech_level" in the User Profile.

Steps and Requirements

Step 5. Review the user profile.

1. Writing Style Patterns

This section describes the user's linguistic habits—how they form sentences and structure their writing.

Pattern	Description
Vocabulary	Describes the user's typical word choice (e.g., Basic, Advanced, or Technical).
Formatting	Details whether the user uses formatting like bullet points and bold text, or writes in simple paragraphs.
Padding	Explains f the user's writing is direct (Reduced Padding) or uses softer, more indirect language (Balanced Padding).
Sentence Structure	Defines if the user writes short, direct sentences (Segmented) or mixes lengths and complexity (Balanced).
Speech Level	The degree of formality, politeness, and social stance expressed through language choice, especially verb endings and honorific forms, depending on the relationship between speaker and listener. This attribute is only applicable to ko_KR and ja_JP .

2. Grammar / Punctuation

This section outlines the user's typical habits for punctuation, such as using exclamation points, commas, or capitalization.

Step 7 – Compare Responses

Appendix

Steps and Requirements

Step 5. Review the user profile.

3. Mail Component Patterns

This section lists the specific phrases and conventions the user prefers for different parts of an email.

Component	Description
Address Forms	Names or terms the user uses to directly address the mail recipient. This includes informal nicknames in English as well as culturally specific address forms in other languages (e.g., honorific titles, kinship terms, respectful suffixes).
Salutations	The specific greetings the user prefers (e.g., "Hi", "Hey", "Dear").
Openings	Common opening sentences or phrases used after the greeting.
Closings	Common closing phrases or sentences used before the sign-off.
Sign-offs	The expressions the user prefers to sign off with (e.g., "Thanks", "Best", "Cheers").
Signatures	How the user typically writes their name (e.g., full name, first name, or initials).

Steps and Requirements

Step 6. Evaluate the personalization quality of the reply.

Overview

You have evaluated the generic quality of the suggested reply. Now, you'll be evaluating the personalization quality. There is only one dimension to evaluate in this step.

Dimension	Description
Personalization	Personalization measures how well the suggested reply captures the user's unique communication style while considering the conversation context.

Evaluate this dimension independently

Your evaluation of Personalization should be independent of all the other dimensions. This means that a response can be **Personalized** but fails the Groundedness or Instruction Adherence & Contextual Fit dimension.

OR, the response can be **Generic** or **Mismatched** but still passes some of the other generic quality dimensions.

Step 5 – Review User Profile

Step 6 – Evaluate Personalization

Step 7 – Compare Responses

Appendix

Steps and Requirements

Step 6. Evaluate the personalization quality of the reply.

Grading Question and Scales

Q. How well does the suggested reply reflect the user’s communication style?

Personalized

- The draft accurately reflects the user’s writing style patterns (vocabulary level, formatting, padding, sentence structure, grammar patterns), appropriately uses the user’s typical mail components (salutations, openings, closings, sign-offs, signature), and aligns with how the user communicates given their relationship with the recipient. The draft reads as authentically from this user.

Contextually Adapted

- The draft intentionally deviates from some aspects of the user’s typical style in ways that are appropriate for the specific email context. For example: using more formal language than usual for a sensitive topic, being more concise than usual for an urgent matter, or adjusting tone to match an unusual situation. These adaptations represent natural adjustments the user would make, even though they differ from the profile.

Step 6 – Evaluate Personalization

Step 7 – Compare Responses

Appendix

Steps and Requirements

Step 6. Evaluate the personalization quality of the reply.

Grading Question and Scales

Q. How well does the suggested reply reflect the user’s communication style?

Generic

- The draft draft lacks the user’s distinctive style characteristics and reads as a generic template response that anyone might send. It fails to incorporate the user’s vocabulary level, formatting preferences, padding style, sentence structure, grammar patterns, or typical mail components when these would be appropriate for the context. The draft is functionally correct but doesn’t sound like this particular user.

Mismatched

- The draft contradicts the user’s established communication patterns in ways not justified by the email context. For example: using technical jargon when the user typically writes in basic vocabulary, applying strong formatting when the user never formats emails, using formal sign-offs the user never employs, or adopting a writing style that doesn’t align with the user’s relationship with the recipient. These mismatches make the email feel unauthentic.

Grading Question and Scales

💡 More context for analysts to align with the engineering team:

For the engineering team:

- **Personalized and Contextually Adapted:** This receives a similar score because the assistant should not be penalized for providing a relevant, context-appropriate reply.
- **Generic:** This incurs a penalty when a reply could have been personalized but was not.

Step 6. Evaluate the personalization quality of the reply.

Grading Question and Scales

How to evaluate the Personalization dimension?

It is acknowledged by the engineering team that this dimension can be subjective and context-based. To guide your grading, we have added the grading principles below:

Personalization Dimension - Grading Principles

- **Guidance, Not Law:** Consider the guidelines for this dimension as a framework to inform your decisions, not strict mandates. Human communication is fluid, and our goal is to capture its nuances.
- **User Profile as a Tendency:** The user profile (capitalization, punctuation, emoji use, abbreviations, etc..) describes what a user *often* does, not what they *always* do. It's "including but not limited to" these elements. Look for patterns, but recognize exceptions.
- **Context is Key:** The relevance of specific profile components (e.g., emoji vs. capitalization) is dynamic and depends entirely on the conversation's context. Use your common sense and the provided examples to weigh which components are most significant for the task at hand.

Steps and Requirements

Step 6. Evaluate the personalization quality of the reply.

Grading Question and Scales

Personalization Dimension - Grading Principles

- **Leverage Your Insight:** We value your ability to extract patterns and make reasonable, informed decisions. Think beyond surface-level checks and consider the overall "feel" of the reply in relation to the user's typical communication style.
- **Aim for Likelihood:** Your decision is about assessing the likelihood that a reply aligns with the user's personalized style. A "good" personalization might not perfectly match every single aspect, but it should feel authentic and appropriate.

Examples

User Profile

Input Email: "Hi Marija, Hope you are doing well. I need to schedule a 30-minute review of the Q3 budget report with you and Thomas. My calendar is open on Wednesday. What time works for you? Thanks, David"

Prompt: "Tell David you're also free on Thursday and offer three specific times. Use a list."

	Suggested Reply	Grade	Rationale
1	Hi David, Hope you are doing well. I can do Wednesday or Thursday for the budget review. Here are a few times that work for me: • Wednesday at 10:00 AM • Thursday at 1:00 PM • Thursday at 3:30 PM Please let me know if any of these will work for you. Thank You, Marija Erik	 Personalized	This reply accurately reflects Marija's profile. It uses her specific Hi salutation, Hope you are doing well opening, strong formatting (the bulleted list), Thank You sign-off, and full Marija Erik signature. It reads as authentically from her.

Examples

User Profile

	Suggested Reply	Grade	Rationale
2	Hi David, I am also available on Thursday. I could do Wednesday at 10am, Thursday at 1pm, or Thursday at 3:30pm. Thanks, Marija	 Generic	This reply is functionally correct but lacks Marija's distinctive style. It fails to use her specific opening ("Hope you are doing well"), doesn't use the list format (strong_formatting), and uses a generic "Thanks" and first name signature instead of her specific "Thank You" and full name.

Table of Contents

Step 6 – Evaluate Personalization

Step 7 – Compare Responses

Appendix

Steps and Requirements

Step 6. Evaluate the personalization quality of the reply.

Examples

User Profile

	Suggested Reply	Grade	Rationale
3	hey david, i can meet. wednesday 10am. thursday 1pm. or thursday 3:30pm. pick one. thx, M.E.	✗ Mismatched	This reply contradicts Marija's profile. The style is overly casual and blunt ("hey," "pick one," "thx"), which clashes with her advanced vocabulary and balanced_padding. The lack of capitalization and use of initials in the signature are also direct mismatches.
4	<i>(For this example, assume the input email was marked URGENT)</i> Hi David, I can meet at 4:00 PM today. Sending you an invite now. Thank You, Marija Erik	✓ Contextually Adapted	This reply intentionally deviates from the profile for a good reason. Given the urgency, it drops Marija's usual "Hope you are doing well" opening and balanced padding to be more direct and efficient. This is a natural adjustment she would make, while still retaining her core professional sign-off and signature.

The tables below provide definitions or scenarios for the labels in the user profile.

!! Important: While the user communication profile provides general traits about how a user typically writes emails, it is crucial to consider the email context when evaluating personalization.

- For example, what is considered to be “basic vocabulary” can be different for an English major vs. someone who goes to a vocational school (or in academic research vs. high-school classroom).
- Refer to the table below for the label definitions, but use context and input text to refine your evaluation.

Table 1 Writing Style Patterns

Linguistic and structural characteristics defining how the user composes email content.

Category	Pattern Type	Description
Vocabulary	Basic	Uses common, concrete, high-frequency words (10th-grade level or lower). Avoids jargon, cultural idioms, or abstract terms.
	Advanced	Uses a broader range of words for university-educated adults. Includes moderate abstraction, mild figurative language, and standard professional terms.
	Technical	Uses specialized terminology, industry-specific jargon, or domain-specific vocabulary for expert audiences.
Formatting	Lacking Formatting	Rarely or never uses formatting tools, resulting in dense blocks of text.
	Strong Formatting	Regularly uses formatting elements (bullets, numbered lists, bold/italics, structured sections). <i>Note: Highly context-dependent; may only apply when responding to similarly formatted emails.</i>
Padding	Reduced Padding	Omits unnecessary or redundant words. Writing is concise, clear, and direct.
	Balanced Padding	Deliberately uses softened, indirect wording (qualifiers, courtesy phrases, light elaboration) to sound approachable and considerate naturally.
Sentence Structure	Segmented	Uses short, declarative sentences expressing one distinct idea each. Prioritizes directness and rapid comprehension.
	Balanced	Uses a measured mix of sentence lengths and standard connections (e.g., and, but, because). Balances clarity with smooth transitions across multiple concepts.

Appendix

Table 1 Writing Style Patterns

Linguistic and structural characteristics defining how the user composes email content.

Category	Pattern Type	Description
Speech Level	ko_KR - Formally Polite / 하십시오체 (Hasipsio-che)	Highest level of formality. Used by TV broadcasters, in official, business settings, between strangers at the beginning of a conversation, among colleagues in formal settings, and to customers. A conversation with a stranger will generally start out in this style and gradually fade into more and more frequent 해요체(haeyo-che). Endings: ~합니다. ~하십시오.
	ko_KR -Casually Polite / 해요체 (haeyo-che):	Less formal alternative of Formally Polite, which can be used more frequently in most normal, everyday conversations where politeness is expected (해요체(<i>haeyo-che</i>)). It can be used when speaking respectfully or politely, regardless of the relative rank (higher, lower, or the same level) of the addressee. Used between strangers, colleagues and by younger speakers. Endings: ~해요. ~하
	ko_KR -Formally Impolite / 해라체 (Haera-che)	A plain, formal speech used with those who are the same rank or lower, but with no added degree of respect. Used in reported speech and in written materials (books, newspapers and magazines). In conversations, it is used between close friends or relatives of similar age, and by adults to children. Endings: ~한다. ~하신다.
	ko_KR -Casually Impolite / 해체 (Hae-che)	An intimate conversational style used between close friends and relatives of equal age, and by adults to children. Endings: ~해.
