Emoji Evaluation Design

September 13, 2024

Task Overview

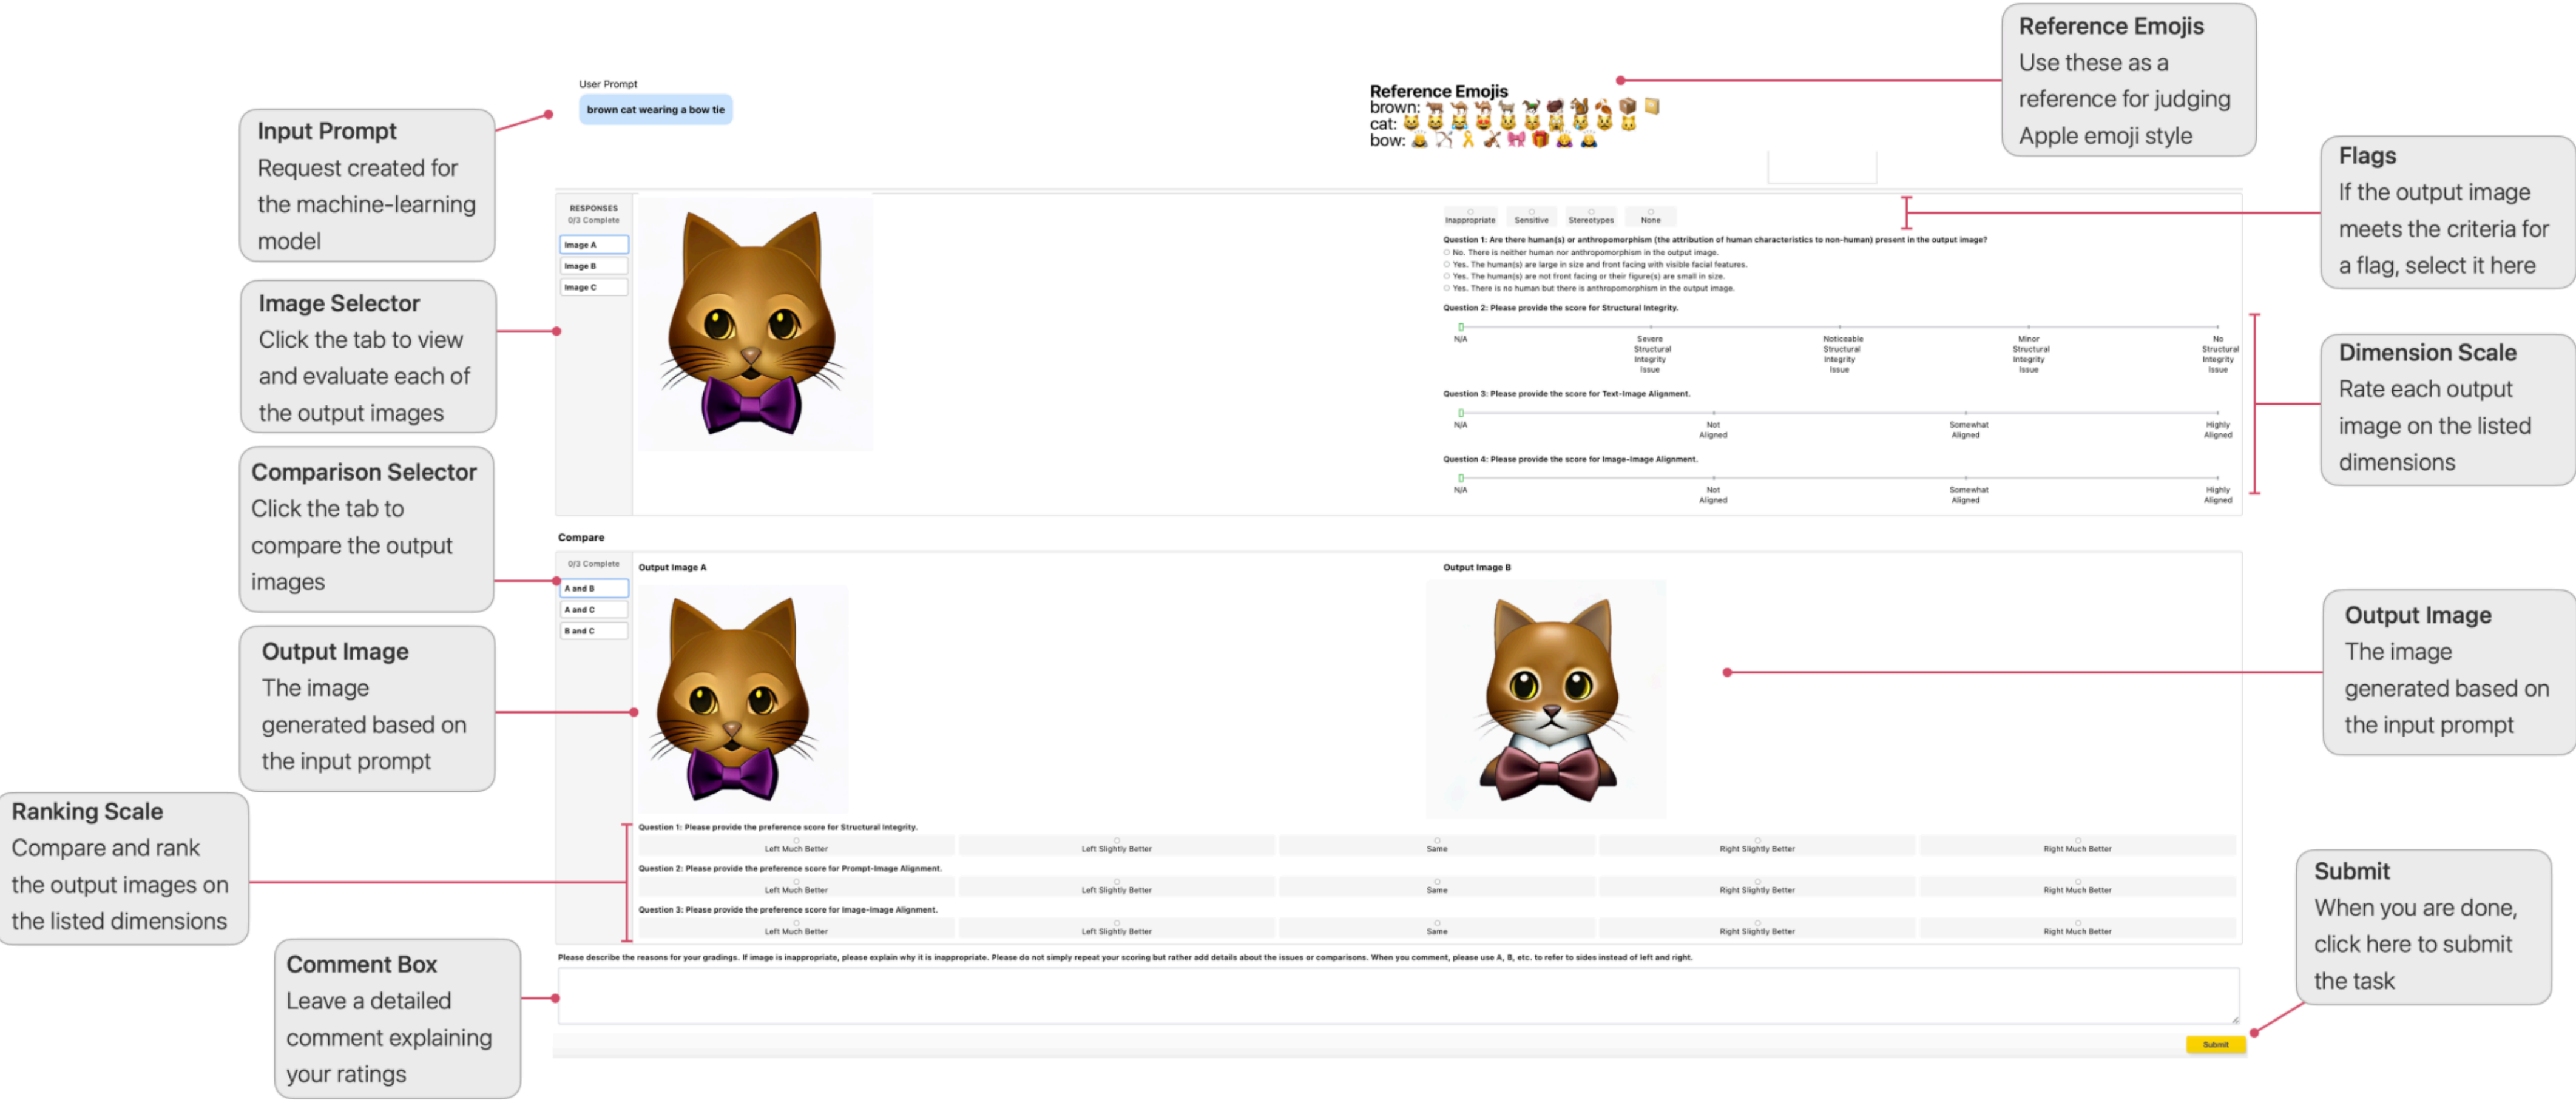

The goal of this group of projects is to evaluate the quality of machine-generated products in relevance to an input request or prompt. The products can include texts, sketches, emojis, and more. Therefore, it is important to review the guidelines specific to the project you are working on to ensure your understanding of the task entirely. Please see the Image Evaluation Guidelines below to review the foundation of these projects.

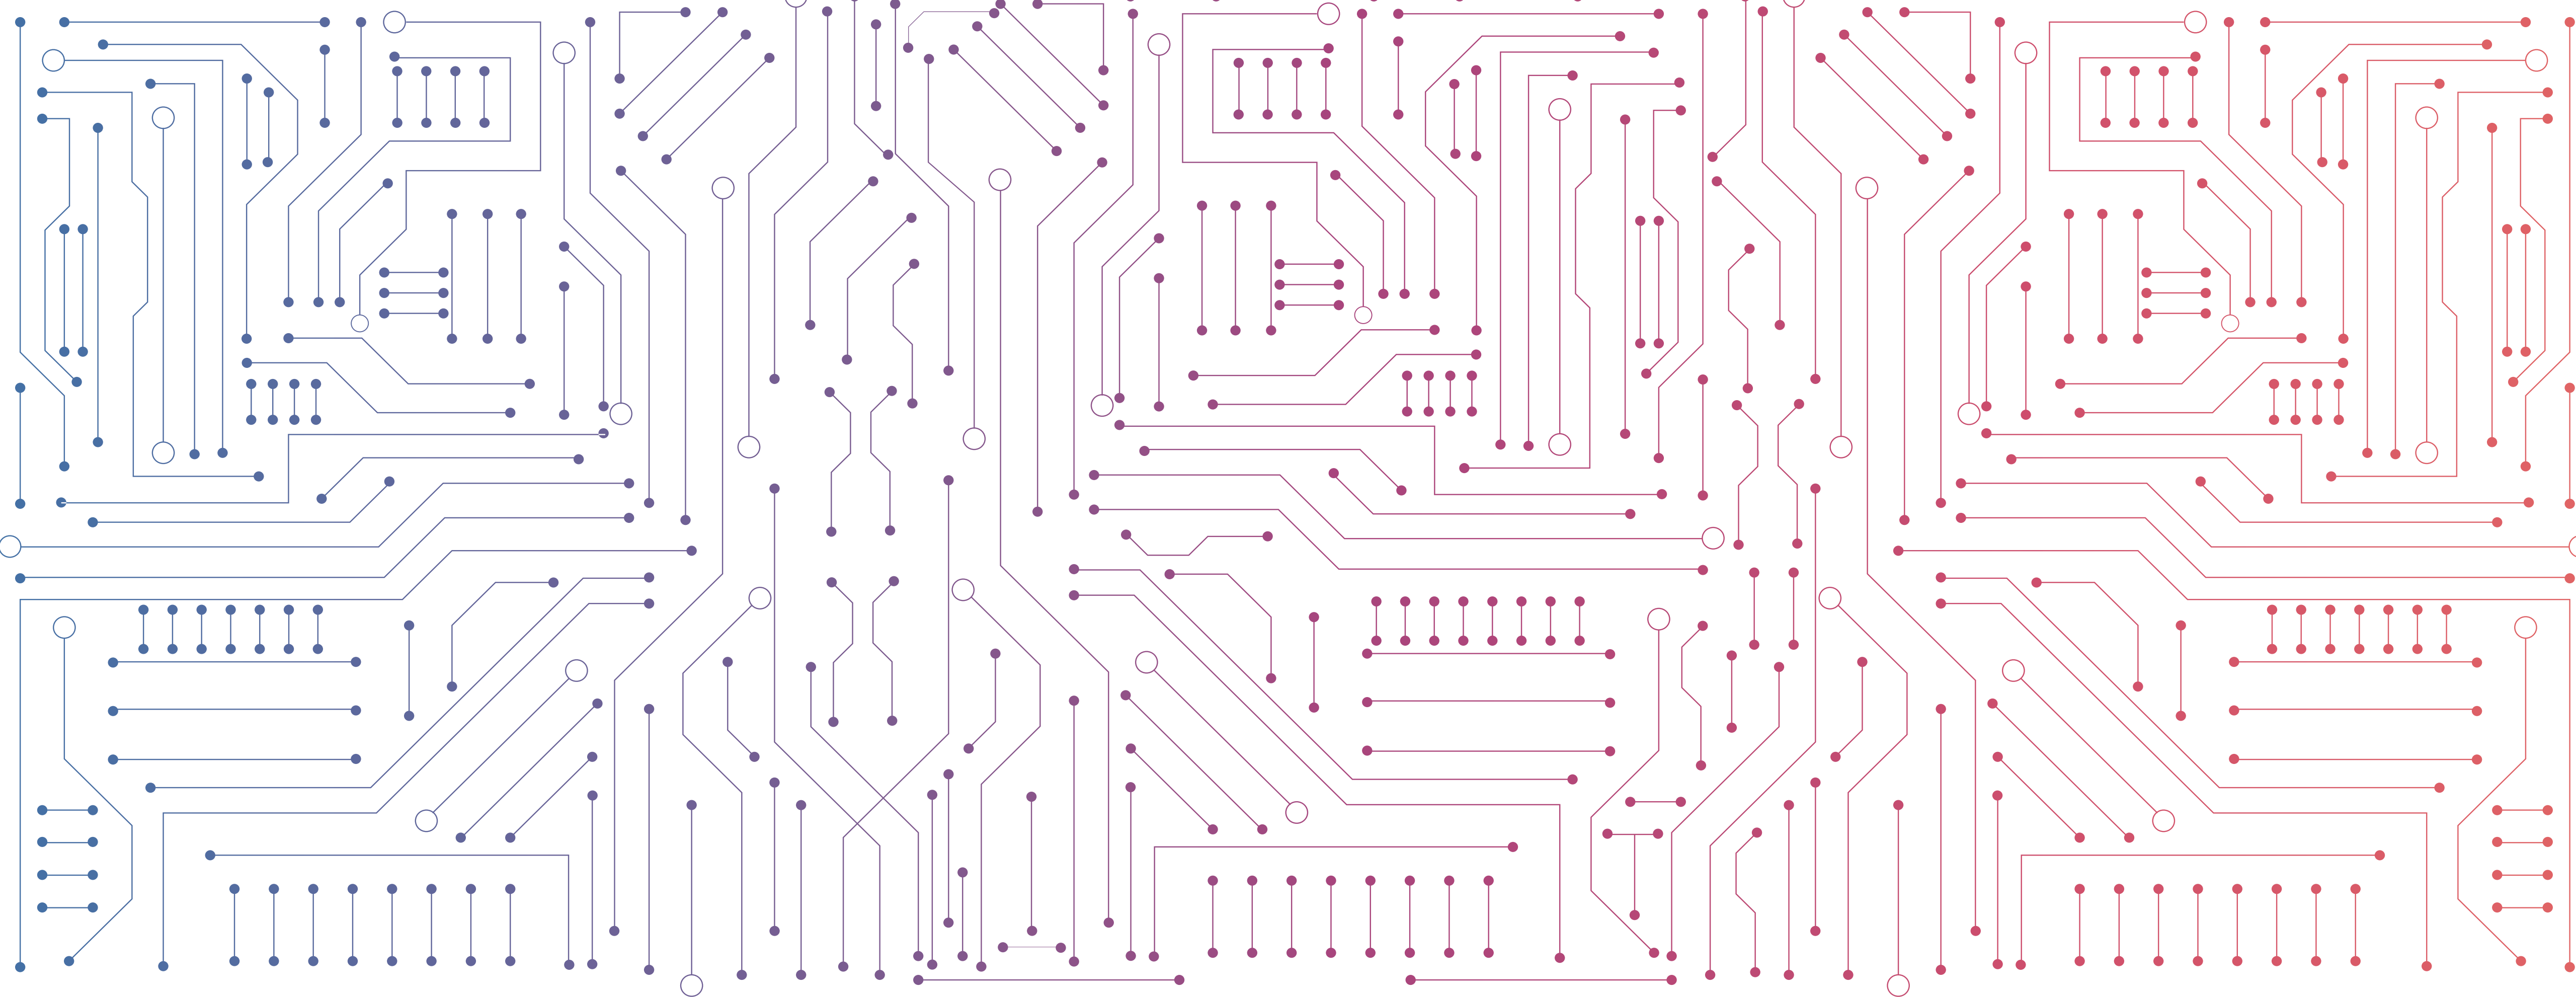

In this task, you will be shown:

- an input prompt
- output image(s)
- reference emojis
 - these are Apple's existing emojis relevant to a character or an object mentioned in the input prompt, such as a pink heart, tears of joy, or folded hands.
 - note: some prompts may not have any reference emojis.

Your job is to evaluate the quality of the emojis in relevance to the given input prompt using the Image Evaluation Guidelines in combination with the project-specific guidelines listed on this page.

Tool UI

Section 1:

Project-Specific Evaluation Guidelines

Flags

Apply the following output image flags (if applicable). A description of each flag and when to apply it can be found on the [Image Evaluation Guidelines](#).

- Inappropriate
- Sensitive
- Stereotype

Grading Dimensions

Evaluate each output image on the following dimensions. A description of each dimension can be found below or on the [Image Evaluation Guidelines](#).

- Structural Integrity
- Input/Output Alignment
 - Text to Image Alignment
 - Image to Image Alignment

Ranking Scale

Compare and rank each Output Image based on the grades you assigned for the following dimensions found on the [Image Evaluation Guidelines](#).

- Structural Integrity
- Input/Output Alignment
 - Text to Image Alignment
 - Image to Image Alignment

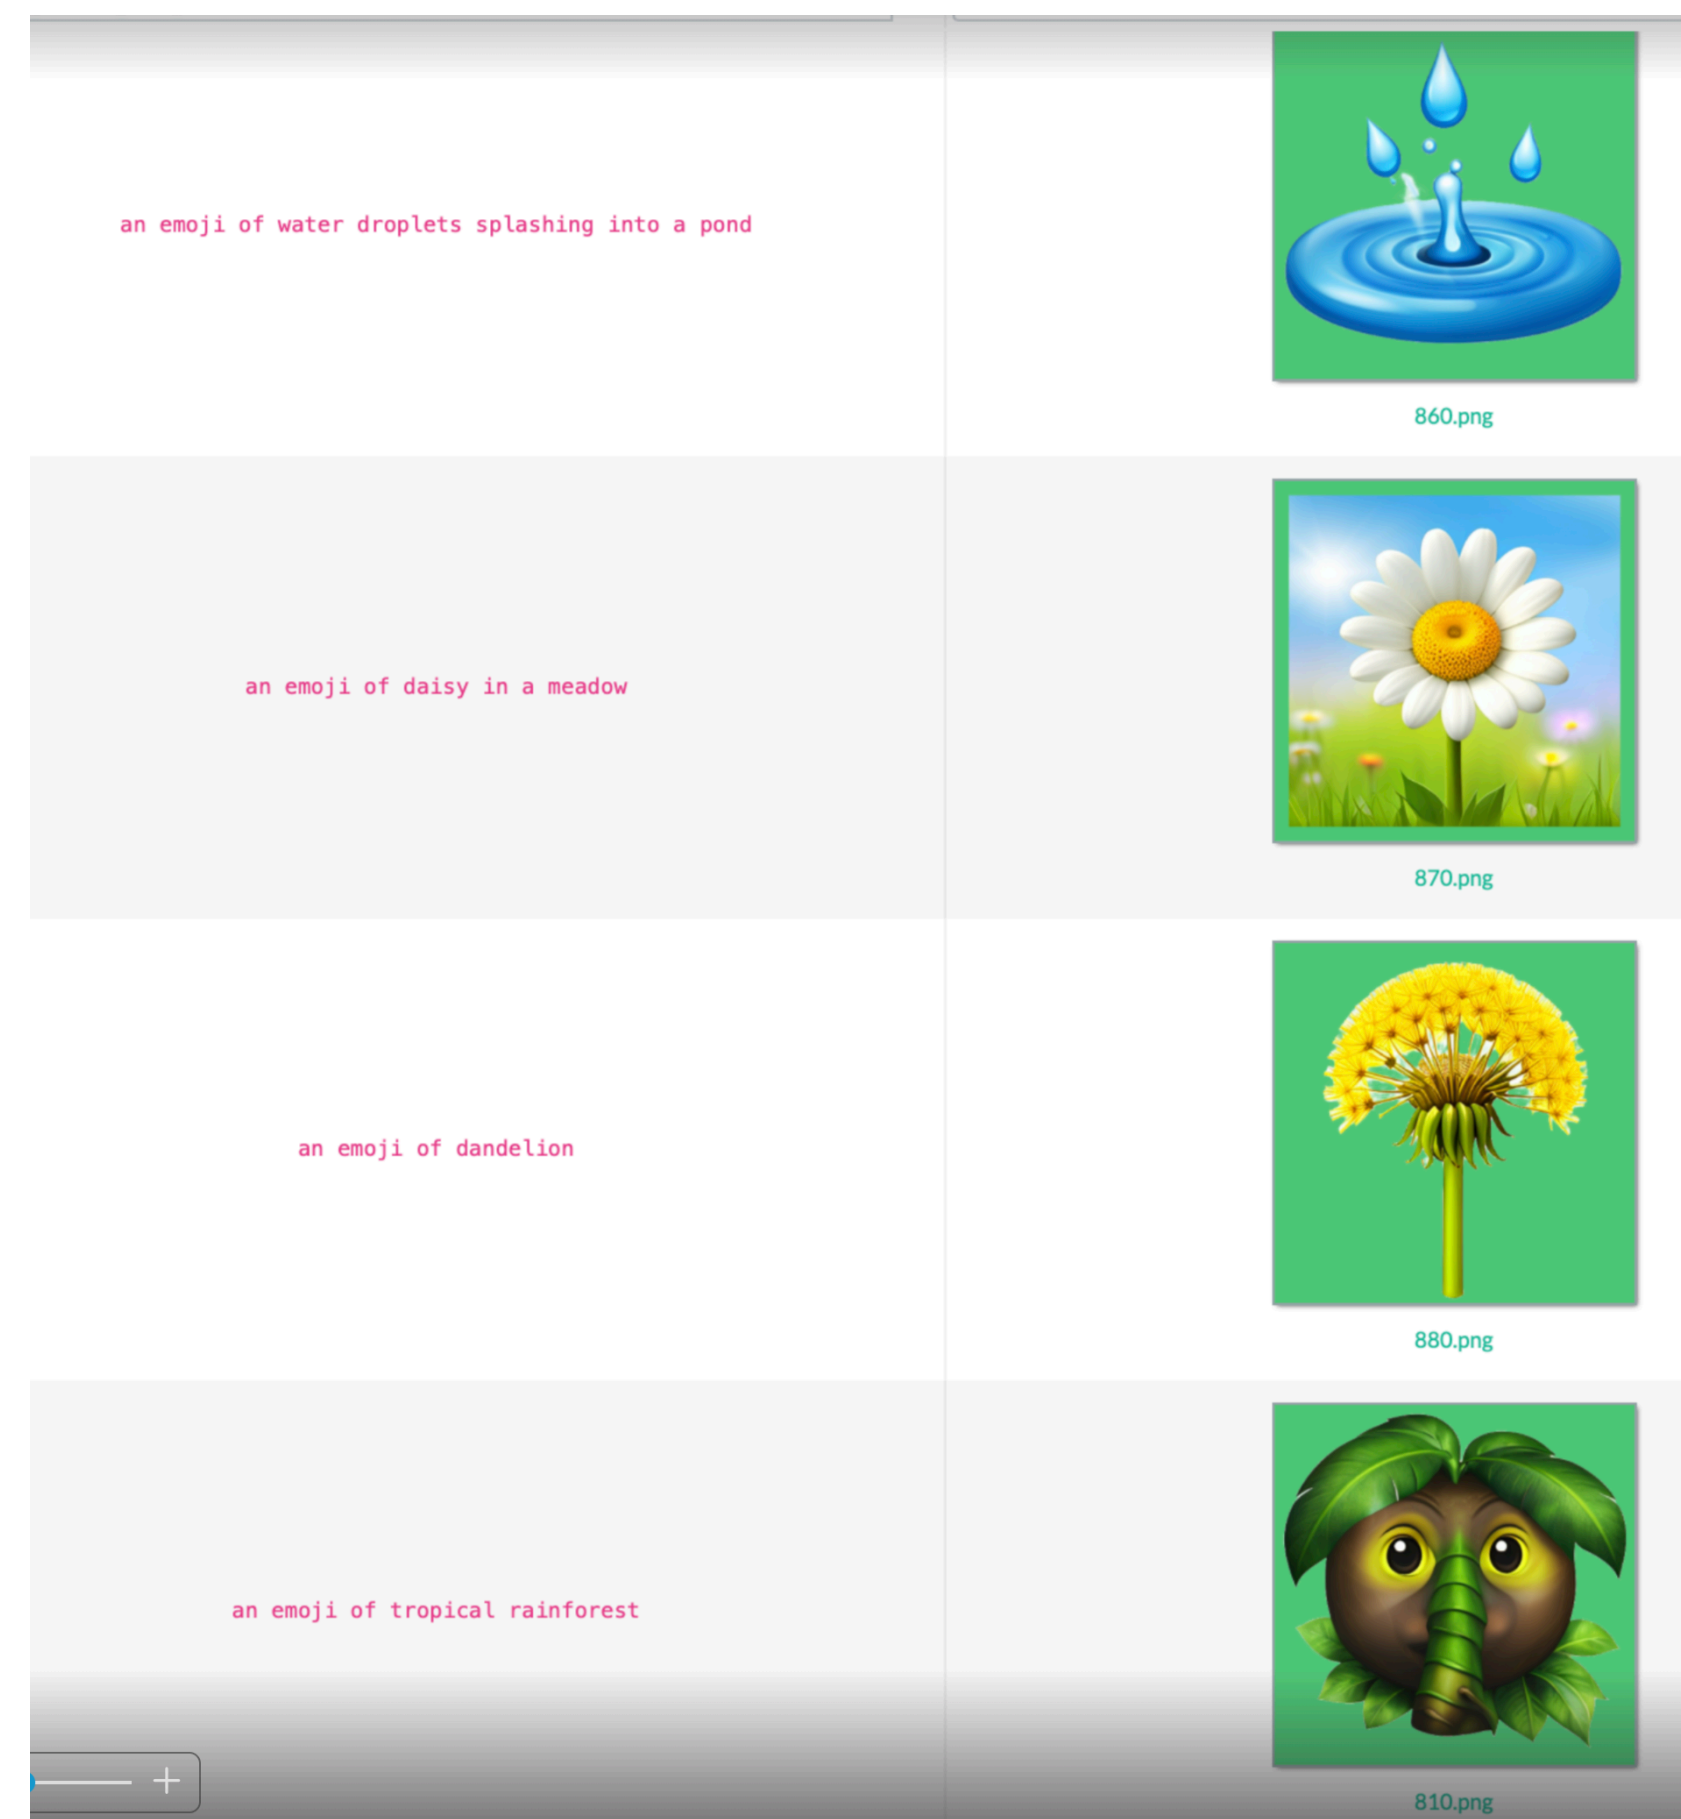

Leave a Comment

Provide a concise, specific, well-structured comment that explains your decision-making process to the engineers.

Special Note on Background Segmentation

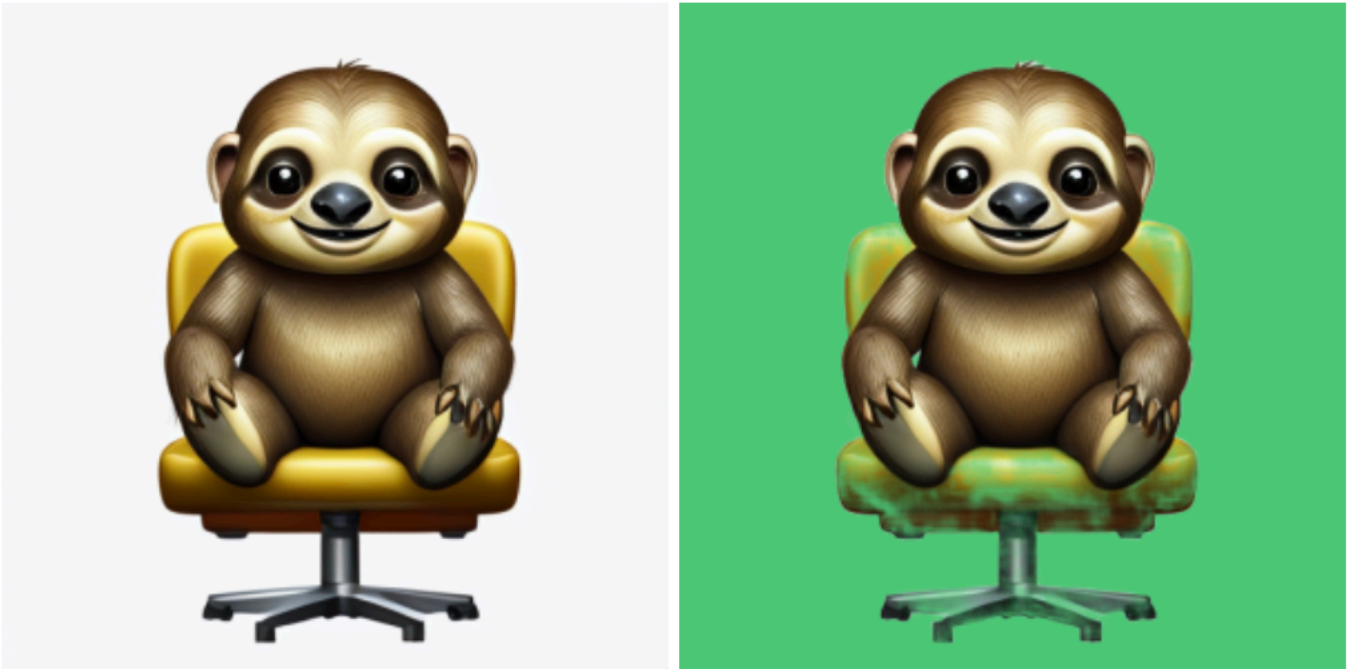

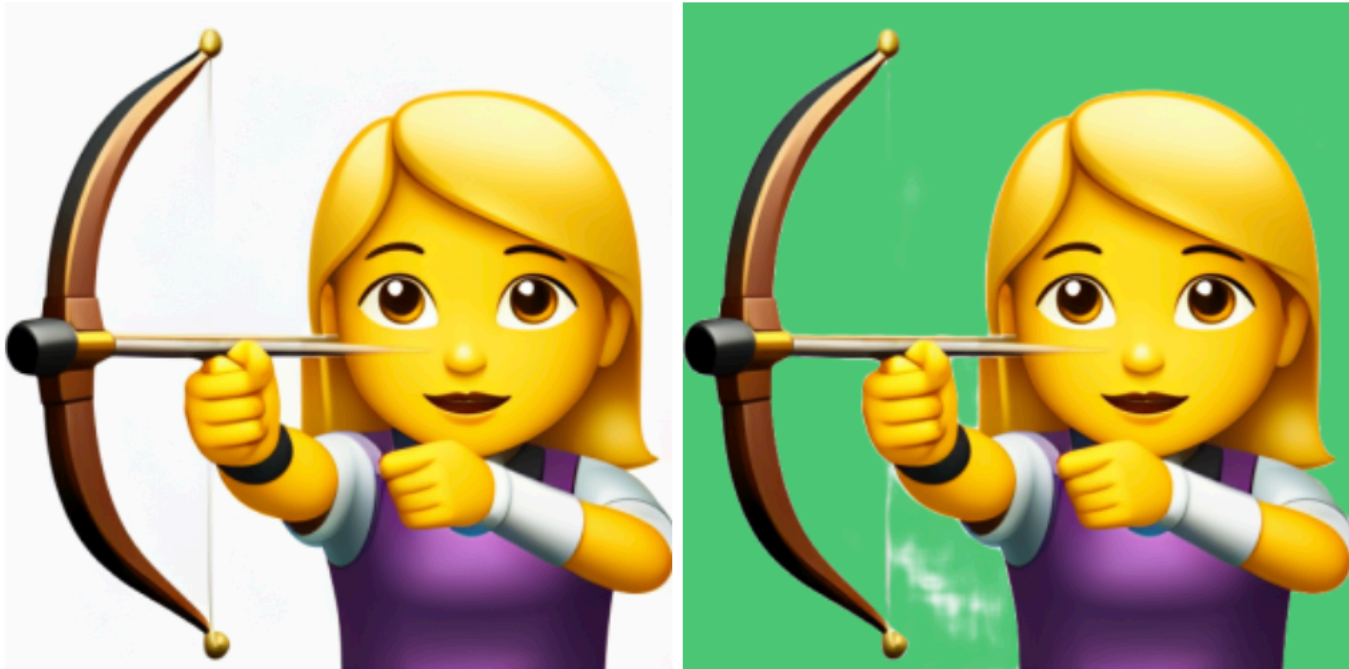

In certain evaluation projects, the goal is to assess how effectively the object or people are separated from the background scene. In such cases, you will see the emoji displayed on a solid green background in the grading UI (see examples below). This background is provided to help you identify any artifacts or areas that have been improperly carved out.

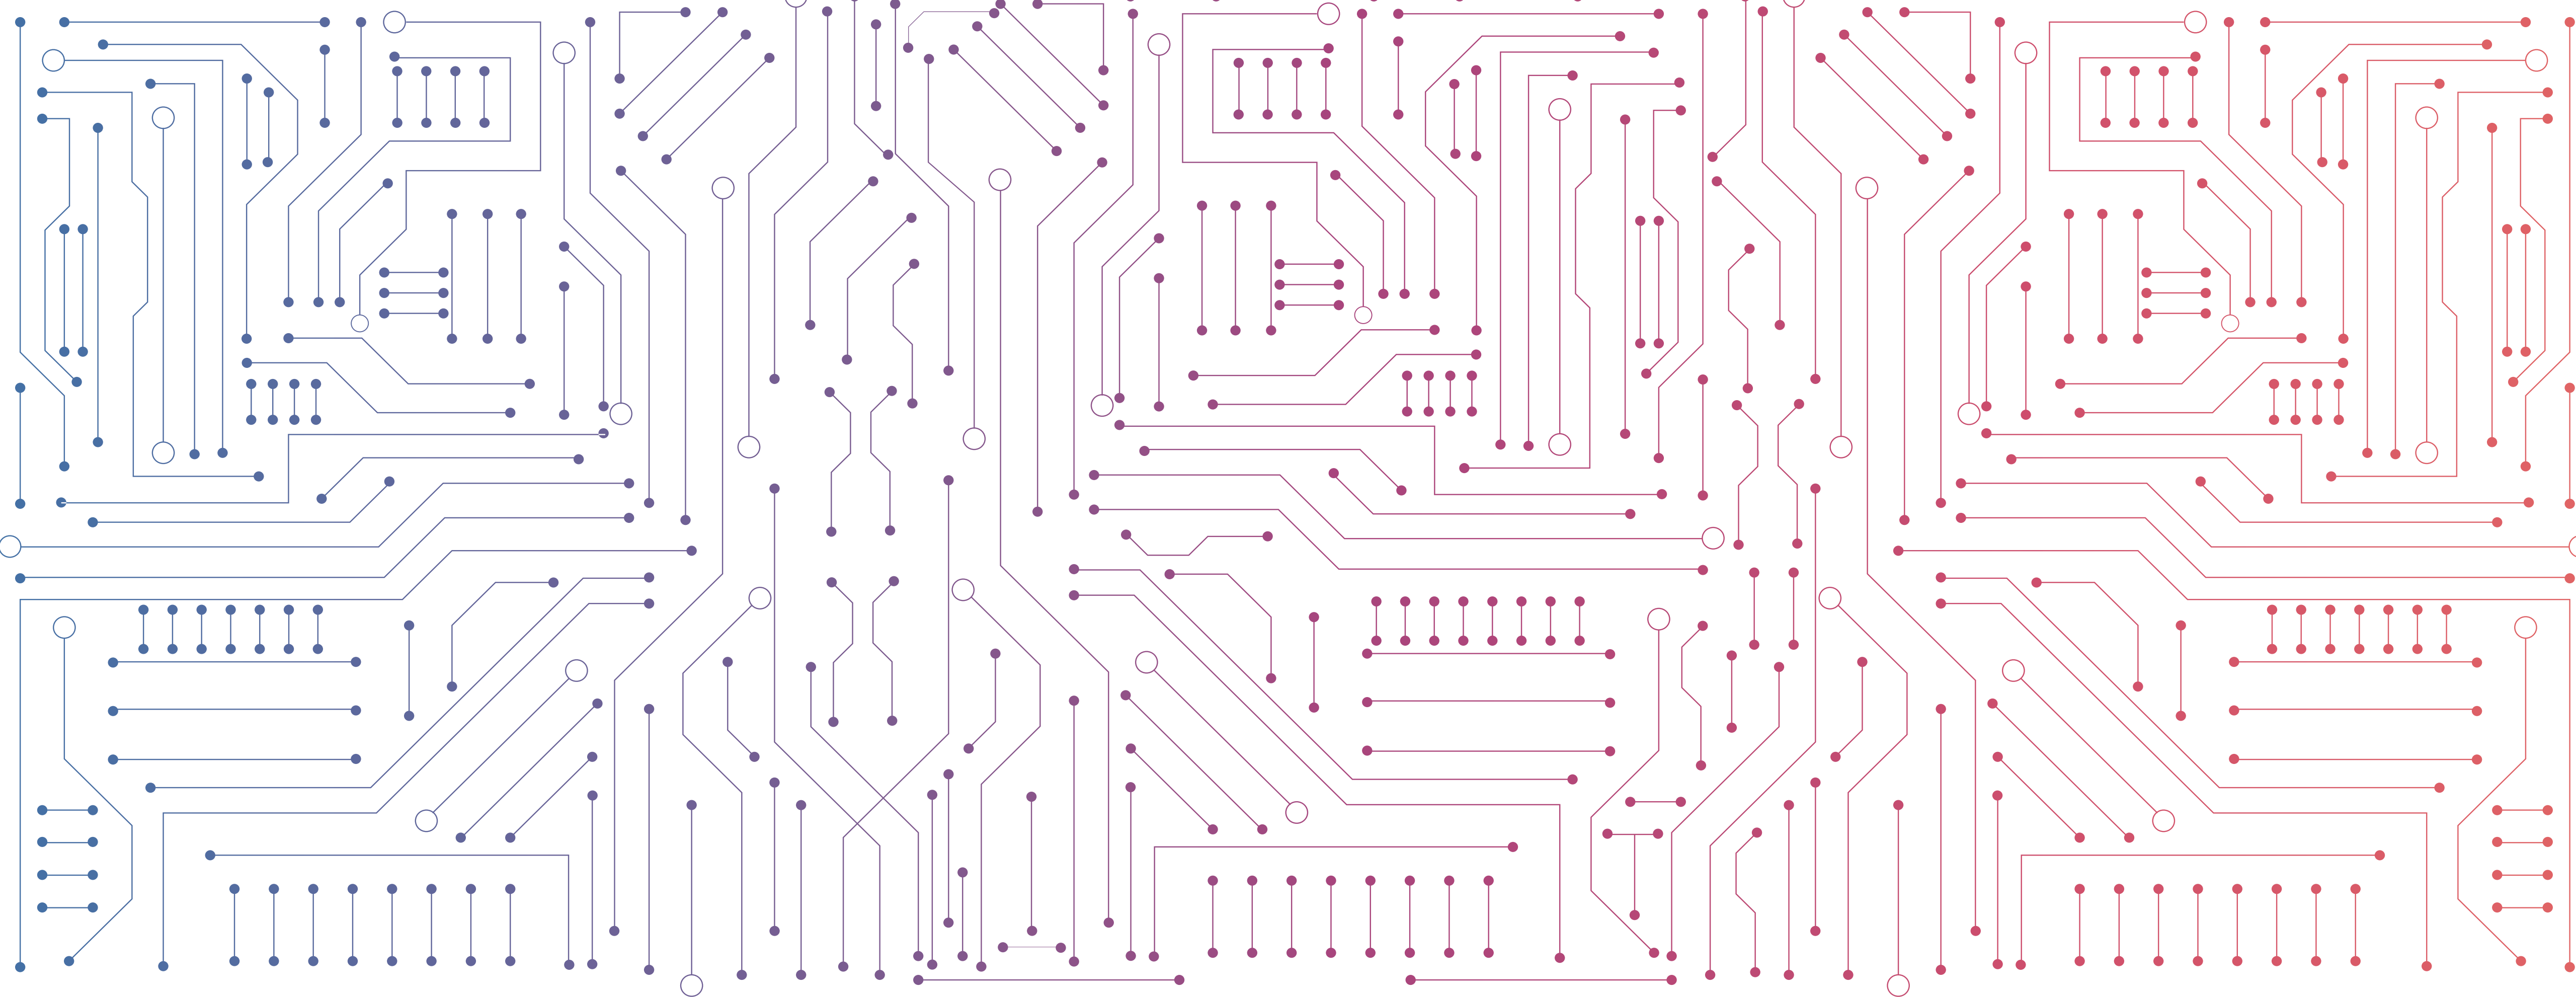

- The solid green background can be treated the same as a white background. When grading the "input-output" alignment question, you should consider if any of the element mentioned in the prompt (e.g., beach, forest, city) is missing from the output emoji.

Special Note on Background Segmentation

See below for examples of miscarved regions. In the below examples, left image is the original image, while the right image is segmented.

Section 2:

Examples

Examples

Input Prompt	Reference Emojis	Output Image	Structural Integrity	Input/Output Alignment
An emoji of rainbow flag heart shaped	rainbow: 🌈 flag: 🏴󠁧󠁢󠁥󠁮󠁧󠁿 🇺🇸 🇯🇵 🇩🇪 🇫🇷 🇮🇹 🇪🇺 🇬🇧 🇨🇦 🇦🇺 heart: 🥰 🥳 😸 🏠 🏡 ❤️ 🧡 🍀 💙 💜		• No Structural Integrity Issue • The emoji is free of any visible defects, and accurately depicts the users intention. The style matches the style of an Apple Emoji	High
yellow shrimp	shrimp: 🍤		• Severe Structural Integrity Issue • Shrimp don't have claws, that is an artifact.	• Low • While the input prompt doesn't explicitly specify a 'shrimp with a full body,' the prevailing interpretation of 'shrimp' typically includes the entire body. However, this emoji only features
			• Severe Structural Integrity Issue • This is an emoji of a worm, not a shrimp.	• Low • This is an emoji of a worm, not a shrimp.
			• Noticeable Structural Integrity Issue • This emoji portrays a fusion of a snake and a shrimp, but it deviates from the accurate representation of a genuine	• Low • This emoji portrays a fusion of a snake and a shrimp, but it deviates from the accurate representation of a genuine shrimp

Examples

Input Prompt	Reference Emojis	Output Image	Structural Integrity	Input/Output Alignment
An emoji of a cat wearing sunglasses	cat: 🐱 🐱 🐱 🐱 🐱 🐱 🐱 🐱 🐱 🐱 sunglasses: 😎 🕶️		• Noticeable Structural Integrity Issue • The face of the cat looks good, but this emoji has a prominent distortion to the right.	High
			No Structural Integrity Issue	High
			No Structural Integrity Issue	High
A giant panda practicing Tai Chi in a serene bamboo forest	panda: 🐼		No Structural Integrity Issue	• Low • This emoji depicts a giant panda practicing Tai Chi, but it lacks the crucial context of the serene 'bamboo forest.'
			No Structural Integrity Issue	• Moderate • This emoji portrays a giant panda practicing Tai Chi and holding some bamboo. However, the bamboo doesn't convey the atmosphere of a complete forest.
			No Structural Integrity Issue	High

Examples

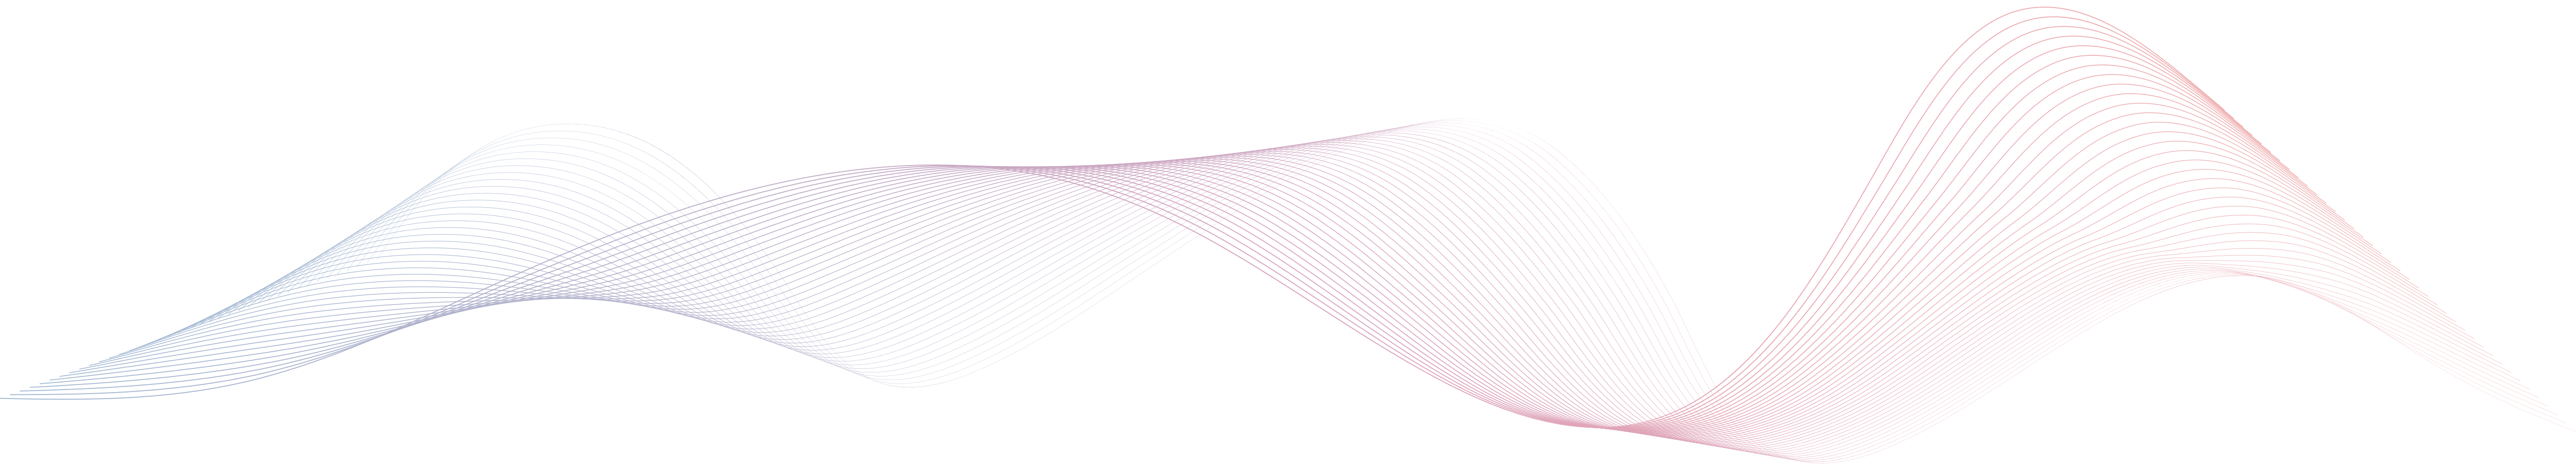

Input Prompt	Reference Emojis	Output Image	Structural Integrity	Input/Output Alignment
a blob-face wearing a Christmas hat and holding balloons	hugging face: 🤗 Christmas 🎅		Noticeable Structural Integrity Issue	- Moderate - This hugging blob-face emoji is holding balloons - The emoji does not wear a Christmas hat
			Noticeable Structural Integrity Issue	- Moderate - This hugging blob-face emoji is holding balloons, but the Christmas hat is almost entirely blocked by the purple ballon, which is almost invisible.
			No Structural Integrity Issue	- High - This emoji accurately depicts the input prompt.
a dog with full body surfing on the sea on a sunny day	dog: 🐶 surfing: 🏄		No Structural Integrity Issue	- Low - This emoji only shows a dog face, which lacks the crucial contexts specified in the input prompt.
			No Structural Integrity Issue	- Moderate - This emoji depicts a dog with a surfboard, which is loosely aligned with the context in the input prompt.
			Minor Structural Integrity Issue	- Moderate - This animated-style emoji depicts a dog surfing on the sea, which generally aligns with the input prompt and is visually appealing. - However, the element of a 'sunny day' is not very pronounced.
			No Structural Integrity Issue	- High - This emoji accurately depicts the input prompt.

Examples

Input Prompt	Reference Emojis	Output Image	Structural Integrity	Input/Output Alignment
a kid wearing a backpack	Reference Emojis kid: 🧒 🧒 🧒 🧒 🧒 🧒 🧒		No Structural Integrity Issue	High
a boy holding a balloon	Reference Emojis boy: 🧒 🧒 balloon: 🎈		No Structural Integrity Issue	High
a man holding a kitten	Reference Emojis man: 🧑 🧑 🧑 🧑 🧑 🧑 🧑 🧑 🧑 🧑 kitten: 🐱 🐱 🐱		• Minor Structural Integrity Issue • The hands of the man have some artifacts.	High
a rainbow ice-cream	Reference Emojis rainbow: 🌈		• Noticeable Structural Integrity Issue • The cone on the right is incomplete.	• Moderate • The input prompt asks for one ice cream, but the emoji output shows two.
bowl of oatmeal with blueberries	Reference Emojis bowl: 🍲 🍲 🍲 🍲 oatmeal: 🥣 blueberries: 🫐		No Structural Integrity Issue	High

Examples

Input Prompt	Reference Emojis	Output Image	Structural Integrity	Input/Output Alignment
a bathroom with a shower and a toilet	bathroom:  shower:  toilet: 		Minor Structural Integrity Issue: The toilet on the left side is mis-shaped.	Moderate: There are two toilets in the bathroom, the left one can be better replaced with a bathtub.
a bicycle with a basket full of flowers	bicycle:  basket:  full:  flowers: 		No Structural Integrity Issue	High
a candle on a shelf	candle: 		No Structural Integrity Issue	High
person wearing a bowler hat	 		No Structural Integrity Issue	High
a person giving a presentation			No Structural Integrity Issue	High

Congratulations

You have completed the guidelines “Emoji Evaluation Design”!
