Overview

In this project, you will assess the quality of images generated from input prompts, with a focus on the dimensions of Structural Integrity, Text-to-Image Alignment and a new dimension called Variety, which evaluates the visual and conceptual diversity across multiple images. The core objective is to assess not just individual image qualities but also how distinct and meaningful variations are presented when generating different visual interpretations of the same prompt.

In this project, you will evaluate **four images** at once instead of one. Please note that this document should be used alongside the [Image Evaluation Guidelines](#), which define the criteria for **Structural Integrity** and **Text-to-Image Alignment**.

Structural Integrity

Refer to the Image [Evaluation Guidelines](#) for detailed criteria for Structural Integrity.

For each of the four images you are evaluating, start by looking at them individually. Focus on the structural integrity of each image, and make a note of the rating. These will help you choose the appropriate overall rating later.

Once you’ve assessed the images, use the additional criteria for Structural Integrity below to choose a rating for the overall image.

Additional Criteria for Grading 4 Images				
Rating	Very Poor	Poor	Good	Very Good
Overall Rating	>= 3 images have SEVERE or Noticeable Structural Integrity issues	1 or 2 images have SEVERE or Noticeable Structural Integrity issues	ALL or FEWER images has only Minor Structural Integrity issues, NO SEVERE or Noticeable Structural Integrity issues	ALL images have NO Structural Integrity issue.

Structural Integrity Examples:

Overall Rating	Very Poor				Poor			
Images								
Explanation	All image don't make sense in term of the shape and structure of the shampoo bottle.				The 2 images in the middle show low structural integrity, with unnatural-looking straw and spoon.			
Overall Rating	Good				Very Good			
Images								
Explanation	There is distortion in the cinnamonon stick, while the other three images display high structural integrity.				All 4 images show high structural integrity with no distortion or artifact found.

Structural Integrity Examples:

Overall Rating	Very Poor				Poor			
Images								
Explanation	3 images on the left contain noticeable issues where the straws disappear under the water.				2 images contain blurred words.			
Overall Rating	Good				Very Good			
Images								
Explanation	It's unnatural to see cat biting fish with tongue outside the mouth.				All 4 images show high structural integrity with no distortion or artifact found.

Text-Image Alignment

Refer to the [Image Evaluation Guidelines](#) for detailed criteria for Text-Image Alignment.

For each of the four images you are evaluating, start by looking at them individually. Focus on the text-image alignment of each image, and make a note of the rating. These will help you choose the appropriate overall rating later.

Once you’ve assessed the images, use the additional criteria for text-image alignment below to choose a rating for the overall image.

Additional Criteria for Grading 4 Images			
Rating	Poor	Neutral	Good
Overall Rating	>= 3 images have alignment issues	1 or 2 images have alignment issues	All images are highly aligned with the prompt

Text-Image Alignment Examples:

	Poor	Poor
Images		
Input Prompt	cloud in the shape of a heart	mac and cheese
Explanation	All images are not aligned with the input prompt.	2 images on the right don't look like it's mac and cheese but the user can get the idea.

	Good
Images	
Input Prompt	tiger playing with a toy airplane
Explanation	All images are aligned with the input prompt.

• [Examples](#)

• [Ranking Scale](#)

Text-Image Alignment Examples:

	Poor	Neutral
Images		
Input Prompt	mouse with a balloon tied to its tail	table and chair
Explanation	None of the ballon is tied to mouses' tail in the images.	One of the images display a sofa instead of a chair, but it's acceptable.

	Good
Images	
Input Prompt	wine bottle with a cheese board
Explanation	All images are aligned with the input prompts.

[New] Variety

Variety refers to the visual and conceptual differences between multiple images representing the same input prompt. The visual concept can be people, living creatures, objects and even emojis...etc. A high score is awarded when each image presents a **distinct and meaningful variation** in composition, pose, backdrop and additional attributes...etc. Sometimes lower variety is expected if the input prompt goes descriptive and exclusive.

Grading Scale			
Rating	Low Variety	Moderate Variety	High Variety
Distinctiveness	The output images show repeated concepts. There's nearly no noticeable difference between them, such as slight changes in color, background details, or viewpoint which doesn't alter reviewers' experience in a meaningful way.	The images show some differences, but the variations are limited in scope or depth. While not identical, the outputs may show similar compositions or visual structure. Minor adjustments are present, but they do not significantly shift the reviewers' perception of the subject.	Each image in the set presents a clearly different visual interpretation of the subject. The variations are substantial and meaningful, such as changes in composition or visual structure. They avoid redundancy and demonstrate visually diverse response to the input prompt.
Creativity	Or, the output images lack creativity, feeling flat and predictable. The model appears to follow a safe, literal approach to the input prompt, offering no alternative styles. Reviewers' might find them no sense of play and surprise.	The output images show some degree of imaginative thinking, but the creative choices are only partially explored. While the images avoid being completely repetitive, they don't fully deliver surprise to the reviewers.	The output images go beyond straightforward interpretations of the input prompt, delivering supprises to the reviewers. These show that model is not just varying visuals, but actively visualizing user prompts from different aspects.

Variety Examples:

	Low Variety	Moderate Variety
Images		
Input Prompt	a bowling alley	cactus wearing sunglasses
Explanation	The output images show repeated concept, only number of the pins and some minor changes are observed. There's room for improvement on the background...etc.	Some degree of variety can be observed, but still lack of some variations. For example, the background or the pose of the cactus...etc.

	High Variety
Images	
Input Prompt	a satellite dish on a roof
Explanation	The styles of the roof and the background vary across all 4 images which show good variety. The image with the night sky shows surprises.

- [New] Variety
 - Examples
- Ranking Scale

Variety Examples:

	Low Variety	Moderate Variety
Images		
Input Prompt	tandoori chicken with naan bread	three finger salute
Explanation	The output images are repeated. The layouts are identical which barely provide any distinctness.	The only difference is the color of the background which doesn't really provide creativity to the users.

	High Variety
Images	
Input Prompt	stop sign
Explanation	The designs varies from image to image, providing rich variation.

Variety Examples:

	Low Variety	Moderate Variety
Images		
Input Prompt	river and bridge	saw and wood
Explanation	The output images are basically identical which provide no variation.	The output images slightly vary. Only angles and colors are changed. Still have room for improvement.

	High Variety
Images	
Input Prompt	window and curtain
Explanation	The colors of the curtain and the views outside the window show rich variation to the users.
